Rev.2

CAUTION

RISK OF EXPLOSION IF BATTERY IS REPLACED BY AN INCORRECT TYPE. DISPOSE OF USED BATTERIES ACCORDING TO THE INSTRUCTIONS.

It may be illegal to dispose of this battery into the municipal waste stream. Check with your local solid waste officials for details in your area for proper disposal.

ATTENTION

IL Y A UN RISQUE D'EXPLOSION SI LA BATTERIE EST REMPLACÉE PAR UN MODÈLE DE TYPE INCORRECT. METTRE AU REBUT LES BATTERIES UTILISÉES SELON LES INSTRUCTIONS DONNÉES.

Il peut être illégal de jeter les batteries dans des eaux d'égout municipales. Vérifiez avec les fonctionnaires municipaux de votre région pour les détails concernant des déchets solides et une mise au rebut appropriée.

Notation of products in the manual

For the purpose of this service manual, products are identified by print speed, and presence of FAX.

ECOSYS M2030dn Type PN	: 3in1 model by 30ppm (without FAX and document processor)
ECOSYS M2030dn	: 3in1 model by 30ppm (without FAX)
ECOSYS M2530dn	: 4in1 model by 30ppm (with FAX)
ECOSYS M2035dn	: 3in1 model by 35ppm (without FAX)
ECOSYS M2535dn	: 4in1 model by 35ppm (with FAX)

Safety precautions

This booklet provides safety warnings and precautions for our service personnel to ensure the safety of their customers, their machines as well as themselves during maintenance activities. Service personnel are advised to read this booklet carefully to familiarize themselves with the warnings and precautions described here before engaging in maintenance activities.

Safety warnings and precautions

Various symbols are used to protect our service personnel and customers from physical danger and to prevent damage to their property. These symbols are described below:

 **DANGER:** High risk of serious bodily injury or death may result from insufficient attention to or incorrect compliance with warning messages using this symbol.

 **WARNING:** Serious bodily injury or death may result from insufficient attention to or incorrect compliance with warning messages using this symbol.

 **CAUTION:** Bodily injury or damage to property may result from insufficient attention to or incorrect compliance with warning messages using this symbol.

Symbols

The triangle () symbol indicates a warning including danger and caution. The specific point of attention is shown inside the symbol.

General warning.

Warning of risk of electric shock.

Warning of high temperature.

 indicates a prohibited action. The specific prohibition is shown inside the symbol.

General prohibited action.

Disassembly prohibited.

 indicates that action is required. The specific action required is shown inside the symbol.

General action required.

Remove the power plug from the wall outlet.

Always ground the copier.

1. Installation Precautions

WARNING

- Do not use a power supply with a voltage other than that specified. Avoid multiple connections to one outlet: they may cause fire or electric shock. When using an extension cable, always check that it is adequate for the rated current.
- Connect the ground wire to a suitable grounding point. Not grounding the copier may cause fire or electric shock. Connecting the earth wire to an object not approved for the purpose may cause explosion or electric shock. Never connect the ground cable to any of the following: gas pipes, lightning rods, ground cables for telephone lines and water pipes or faucets not approved by the proper authorities.

CAUTION:

- Do not place the copier on an infirm or angled surface: the copier may tip over, causing injury.
- Do not install the copier in a humid or dusty place. This may cause fire or electric shock.
- Do not install the copier near a radiator, heater, other heat source or near flammable material. This may cause fire.
- Allow sufficient space around the copier to allow the ventilation grills to keep the machine as cool as possible. Insufficient ventilation may cause heat buildup and poor copying performance.
- Always handle the machine by the correct locations when moving it.
- Always use anti-toppling and locking devices on copiers so equipped. Failure to do this may cause the copier to move unexpectedly or topple, leading to injury.
- Avoid inhaling toner or developer excessively. Protect the eyes. If toner or developer is accidentally ingested, drink a lot of water to dilute it in the stomach and obtain medical attention immediately. If it gets into the eyes, rinse immediately with copious amounts of water and obtain medical attention.
- Advice customers that they must always follow the safety warnings and precautions in the copier's instruction handbook.

2. Precautions for Maintenance

WARNING

- Always remove the power plug from the wall outlet before starting machine disassembly. 
- Always follow the procedures for maintenance described in the service manual and other related brochures. 
- Under no circumstances attempt to bypass or disable safety features including safety mechanisms and protective circuits. 
- Always use parts having the correct specifications. 
- Always use the thermostat or thermal fuse specified in the service manual or other related brochure when replacing them. Using a piece of wire, for example, could lead to fire or other serious accident. 
- When the service manual or other serious brochure specifies a distance or gap for installation of a part, always use the correct scale and measure carefully. 
- Always check that the copier is correctly connected to an outlet with a ground connection. 
- Check that the power cable covering is free of damage. Check that the power plug is dust-free. If it is dirty, clean it to remove the risk of fire or electric shock. 
- Never attempt to disassemble the optical unit in machines using lasers. Leaking laser light may damage eyesight. 
- Handle the charger sections with care. They are charged to high potentials and may cause electric shock if handled improperly. 

CAUTION

- Wear safe clothing. If wearing loose clothing or accessories such as ties, make sure they are safely secured so they will not be caught in rotating sections. 
- Use utmost caution when working on a powered machine. Keep away from chains and belts. 
- Handle the fixing section with care to avoid burns as it can be extremely hot. 
- Check that the fixing unit thermistor, heat and press rollers are clean. Dirt on them can cause abnormally high temperatures. 

- Do not remove the ozone filter, if any, from the copier except for routine replacement. 
- Do not pull on the AC power cord or connector wires on high-voltage components when removing them; always hold the plug itself. 
- Do not route the power cable where it may be stood on or trapped. If necessary, protect it with a cable cover or other appropriate item. 
- Treat the ends of the wire carefully when installing a new charger wire to avoid electric leaks. 
- Remove toner completely from electronic components. 
- Run wire harnesses carefully so that wires will not be trapped or damaged. 
- After maintenance, always check that all the parts, screws, connectors and wires that were removed, have been refitted correctly. Special attention should be paid to any forgotten connector, trapped wire and missing screws. 
- Check that all the caution labels that should be present on the machine according to the instruction handbook are clean and not peeling. Replace with new ones if necessary. 
- Handle greases and solvents with care by following the instructions below: 
 - Use only a small amount of solvent at a time, being careful not to spill. Wipe spills off completely.
 - Ventilate the room well while using grease or solvents.
 - Allow applied solvents to evaporate completely before refitting the covers or turning the power switch on.
 - Always wash hands afterwards.
- Never dispose of toner or toner bottles in fire. Toner may cause sparks when exposed directly to fire in a furnace, etc. 
- Should smoke be seen coming from the copier, remove the power plug from the wall outlet immediately. 

3. Miscellaneous

WARNING

- Never attempt to heat the drum or expose it to any organic solvents such as alcohol, other than the specified refiner; it may generate toxic gas. 
- Keep the machine away from flammable liquids, gases, and aerosols. A fire or an electric shock might occur.

PAPER FEEDER

1-1-1 Specifications

Machine

Item	Specifications				
	3 in 1 model (without FAX)		4 in 1 model (with FAX)		
	30ppm	35ppm	30ppm	35ppm	
Type	Desktop				
Printing method	Electrophotography by semiconductor laser, single drum system				
Originals	Sheet, Book, 3-dimensional objects (maximum original size: Folio/Legal)				
Original feed system	Fixed				
Paper weight	Cassette	60 to 120 g/m ² (Duplex: 60 to 105 g/m ²)			
	MP tray	60 to 220 g/m ²			
Paper type	Cassette	Plain, Preprinted, Bond, Recycled, Rough, Letterhead, Color, Prepunched, High quality, Custom 1-8			
	MP tray	Plain, Transparency, Preprinted, Labels, Bond, Recycled, Vellum, Rough, Letterhead, Color, Prepunched, Envelope, Cardstock, Thick, High quality, Custom 1-8			
Paper size	Cassette	A4, A5, B5, Letter, Legal, Statement, Oficio II, Folio, 16K, 216×340, Custom			
	MP tray	A4, A5, A6, B5, ISO B5, Letter, Legal, Statement, Executive, Oficio II, Folio, 16K, 216×340, Custom			
Zoom level	Manual mode : 25 to 400%, 1% increments Auto mode : 400%, 200%, 141%, 129%, 115%, 90%, 86%, 78%, 70%, 64%, 50%, 25%				
Copying speed					
When using the DP (Cassette)	A4R	20 sheets/min			
	LetterR	21 sheets/min			
	Legal	17 sheets/min			
	B5R	22 sheets/min			
	A5R	17 sheets/min			
When the DP is not used (Cassette)	A4R	30 sheets/min	35 sheets/min	30 sheets/min	35 sheets/min
	LetterR	32 sheets/min	37 sheets/min	32 sheets/min	37 sheets/min
	Legal	26 sheets/min	30 sheets/min	26 sheets/min	30 sheets/min
	B5R	24 sheets/min	24 sheets/min	24 sheets/min	24 sheets/min
	A5R	17 sheets/min	17 sheets/min	17 sheets/min	17 sheets/min
	A6R	17 sheets/min	17 sheets/min	17 sheets/min	17 sheets/min
First copy time (A4, feed from cassette)	When using the DP : 7.9 s or less When the DP is not used: 6.9 s or less				
Warm-up time (22 °C/71.6 °F, 60% RH)	Power on : 20 s or less				
Paper capacity	Cassette	250 sheets (80g/m ²)			
	MP tray	50 sheets (80 g/m ² , plain paper, A4/Letter or less)			

Item	Specifications			
	3 in 1 model (without FAX)		4 in 1 model (with FAX)	
	30ppm	35ppm	30ppm	35ppm
Output tray capacity	150 sheets (80g/m ²)			
Continuous copying	1 to 999 sheets			
Light source	Exposure lamp (LED)			
Scanning system	Flat bed scanning by CCD image sensor			
Photoconductor	OPC drum (diameter 30 mm)			
Image write system	Semiconductor laser			
Charging system	Scorotron (positive charging)			
Developing system	Mono component dry developing method Toner replenishing: Automatic from the toner container			
Transfer system	Transfer roller (negative charging)			
Separation system	Small diameter separation, discharger electrode			
Cleaning system	Drum: Counter blade			
Charge erasing system	Exposure by cleaning lamp (LED)			
Fusing system	Heat and pressure fusing with the heat roller and the press roller Heat source: halogen heater Abnormally high temperature protection devices: thermostat			
CPU	PowerPC465S (667MHz)			
Main memory	Standard	512 MB		
	Maximum	1536 MB		
Interface	Standard	USB interface connector: 1 (USB 2.0) USB host: 1 Network interface: 1 (10BASE-T/100BASE-TX/1000BASE-T)		
	Option	eKUIO slot: 1 (It uses it by fax in 4in1 model.)		
Resolution	Reading	600 × 600 dpi		
	Writing	600 × 600 dpi		
Operating environment	Temperature	10 to 32.5 °C/50 to 90.5 °F		
	Humidity	15 to 80% RH		
	Altitude	2,500 m/8,202 ft or less		
	Brightness	1,500 lux or less		
Dimensions (W × D × H)	494 × 410 × 366 mm 19 7/16 × 16 1/8 × 14 7/16" (When using the original cover)		494 × 430 × 448 mm 19 7/16 × 16 15/16 × 17 1/4" (When using the DP)	
Weight (with toner container)	15 kg / 33.1 lb (with original cover) 18 kg / 39.7 lb (with DP)			
Space required (W × D) (using MP tray)	494 × 613 mm 19 7/16 × 24 1/8"		494 × 633 mm 19 7/16 × 24 15/16"	

Item	Specifications			
	3 in 1 model (without FAX)		4 in 1 model (with FAX)	
	30ppm	35ppm	30ppm	35ppm
Power source	120 V AC, 60 Hz, more than 10.0 A 220 - 240 V AC, 50/60 Hz, more than 6.0 A			
Options	Paper feeder × 2, Expanded memory, SD card (for printer), Network interface kit

1-2-1 Installation environment

1. Temperature: 10 to 32.5°C/50 to 90.5°F
2. Humidity: 15 to 80%RH
3. Power supply: 120 V AC, 7.8 A
220 - 240 V AC, 4.0 A
4. Power source frequency: 50 Hz $\pm 0.3\%$ /60 Hz $\pm 0.3\%$
5. Installation location

Avoid direct sunlight or bright lighting. Ensure that the photoconductor will not be exposed to direct sunlight or other strong light when removing paper jams.

Avoid locations subject to high temperature and high humidity or low temperature and low humidity; an abrupt change in the environmental temperature; and cool or hot, direct air.

Avoid places subject to dust and vibrations.

Choose a surface capable of supporting the weight of the machine.

Place the machine on a level surface (maximum allowance inclination: 1°).

Avoid air-borne substances that may adversely affect the machine or degrade the photoconductor, such as mercury, acidic or alkaline vapors, inorganic gasses, NO_x, SO_x gases and chlorine-based organic solvents.

Select a well-ventilated location.

6. Allow sufficient access for proper operation and maintenance of the machine.

* 120 V AC model only.

** 220-240 V AC model only.

(2) Removing the tapes

<Procedure>

1. Remove two tapes.
2. Open the sheet.

Figure 1-2-3

3. Remove two tapes A.
4. Open the top cover.
5. Remove the tape B and then remove the spacer.
6. Close the top cover.

Figure 1-2-4

7. Remove two tapes.

Figure 1-2-5

- 8. Open the DP.
- 9. Remove the sheet.
- 10. Remove the paper.

Figure 1-2-6

11. Remove the tape A.
12. Move the lock lever to the position of release.
 - * : When turning on power if the lock lever is not released, the error message is displayed.
13. Close the DP.
14. Remove eight tapes B.

Figure 1-2-7

1-2-3 Installing the expansion memory (option)

<Procedure>

1. Turn off the power switch and pull out the power cable.
Caution: Do not insert or remove expansion memory while machine power is on.
Doing so may cause damage to the machine and the expansion memory.
2. Remove the right side cover.
3. Remove the screw.

Figure 1-2-8

4. Open the memory slot cover.
5. Insert the expansion memory into the memory socket so that the notches on the memory align with the corresponding protrusions in the slot.
6. Close the memory slot cover.
7. Secure the screw.
8. Refit the right side cover.
9. Print a status page to check the memory expansion.

If memory expansion has been properly performed, information on the installed memory is printed with the total memory capacity has been increased. Standard memory capacity 256 MB.

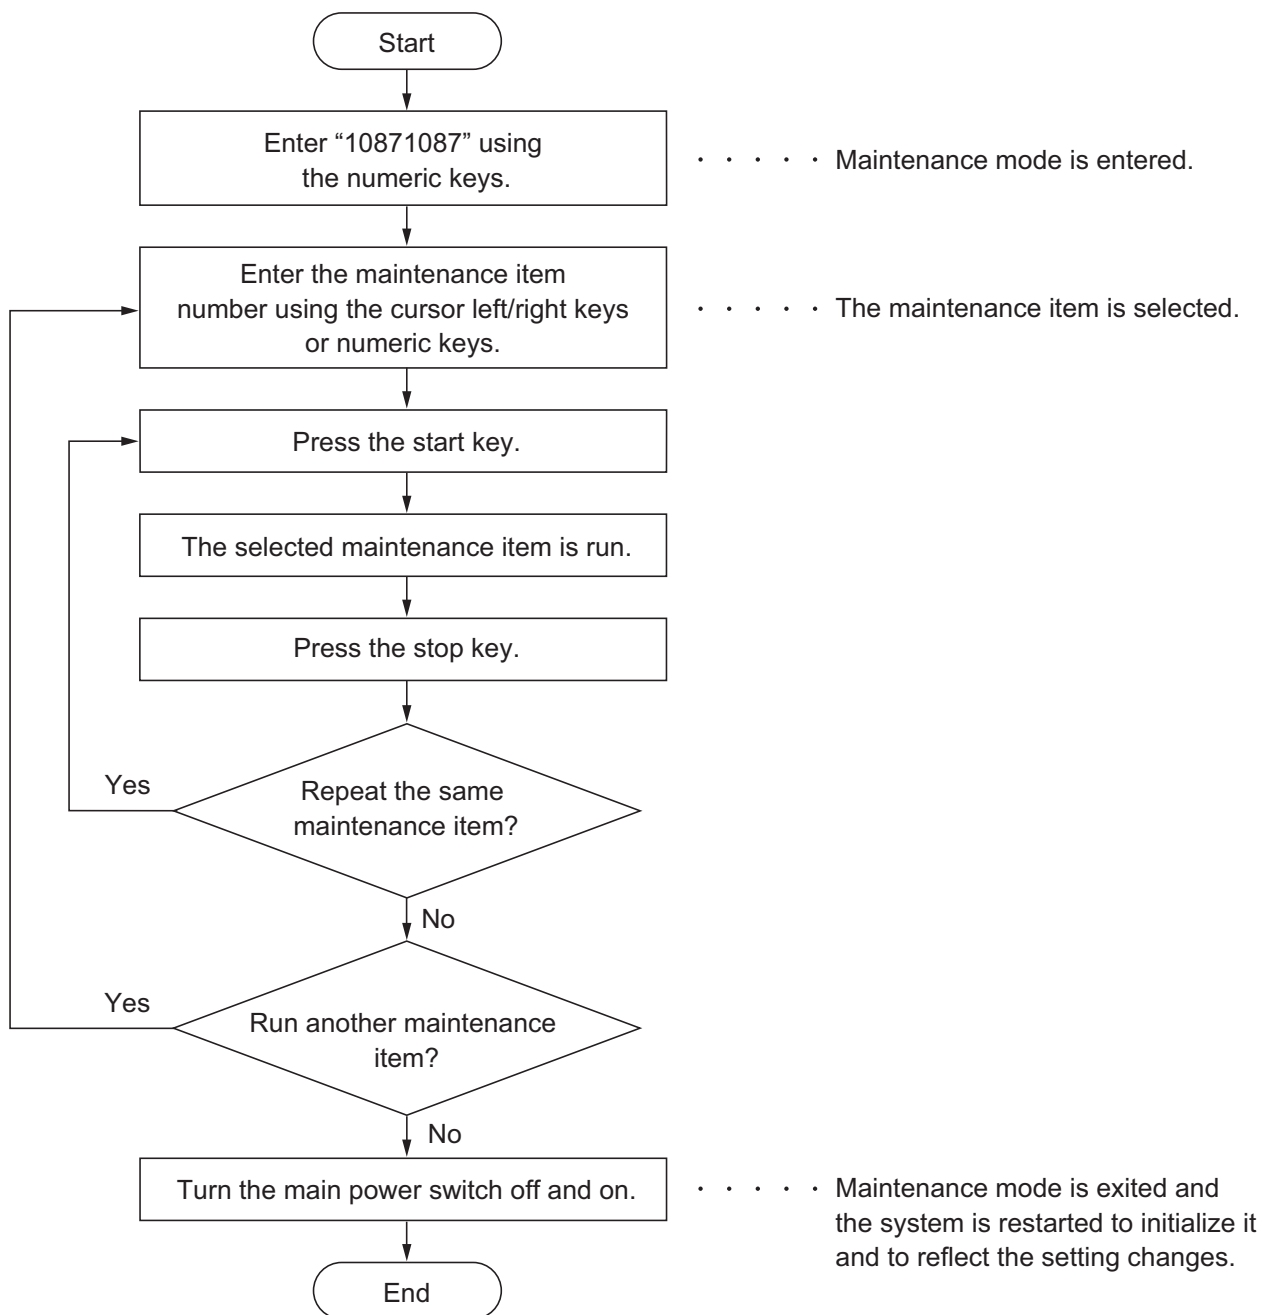

Figure 1-2-9

1-3-1 Maintenance mode

The machine is equipped with a maintenance function which can be used to maintain and service the machine.

(1) Executing a maintenance item

(2) Maintenance modes item list

Section	Item No.	Content of maintenance item	Initial setting
General	U000	Outputting an maintenance report	-
	U002	Setting the factory default data	-
	U004	Setting the machine number	-
Operation panel and support equipment	U203	Checking DP operation	-
	U222	Setting the IC card type	Other
Mode setting	U250	Setting the maintenance cycle	100000
	U251	Checking/clearing the maintenance count	-
	U252	Setting the destination	-
	U253	Switching between double and single counts	Double count
	U260	Selecting the timing for copy counting	EJECT
	U285	Setting service status page	ON
	U332	Setting the size conversion factor	1.0
	U345	Setting the value for maintenance due indication	0
Image processing	U411	Auto Adj Scn	-
	U425	Set Target	-
Fax	U600	Initializing all data	-
	U601	Initializing permanent data	-
	U603	Setting user data 1	DTMF
	U604	Setting user data 2	2 (120 V) 1 (220-240 V)
	U605	Clearing data	-
	U610	Setting system 1	3
		Setting the number of lines to be ignored when receiving a fax at 100% magnification	0
		Setting the number of lines to be ignored when receiving a fax (A4R/LetterR) in the auto reduction mode	0
	U611	Setting system 2	7
		Setting the number of adjustment lines for automatic reduction	22
Setting the number of adjustment lines for automatic reduction when letter size paper is set		26	
U612	Setting system 3	ON	
	Selecting if auto reduction in the auxiliary direction is to be performed	OFF	
	Setting the automatic printing of the protocol list		

Section	Item No.	Content of maintenance item	Initial setting
Fax	U620	Setting the remote switching mode	ONE
	U625	Setting the transmission system 1 Setting the auto redialing interval Setting the number of times of auto redialing	3 (120 V) 2 (220-240 V) 2 (120 V) 3 (220-240 V)
	U630	Setting communication control 1 Setting the communication starting speed Setting the reception speed Setting the waiting period to prevent echo problems at the sender Setting the waiting period to prevent echo problems at the receiver	14400bps/V17 14400bps 300 75
	U631	Setting communication control 2 Setting ECM transmission Setting ECM reception Setting the frequency of the CED signal	ON ON 2100
	U632	Setting communication control 3 Setting the DIS signal to 4 bytes Setting the short protocol transmission Setting the reception of a short protocol transmission Setting the CNG detection times in the fax/telephone auto select mode	OFF ON ON 2TIME
	U633	Setting communication control 4 Enabling/disabling V.34 communication Setting the V.34 symbol speed (3429 Hz) Setting the number of times of DIS signal reception Setting the reference for RTN signal output	ON ON ONCE 15%
	U634	Setting communication control 5	0
	U640	Setting communication time 1 Setting the one-shot detection time for remote switching Setting the continuous detection time for remote switching	7 80
	U641	Setting communication time 2 Setting the T0 time-out time Setting the T1 time-out time Setting the T2 time-out time Setting the Ta time-out time Setting the Tb1 time-out time Setting the Tb2 time-out time Setting the Tc time-out time Setting the Td time-out time	56 36 69 30 20 80 60 9 (120 V) 6 (220-240 V)
	U650	Setting modem 1 Setting the G3 transmission cable equalizer Setting the G3 reception cable equalizer Setting the modem detection level	0dB 0dB 43dBm

Section	Item No.	Content of maintenance item	Initial setting
Fax	U651	Setting modem 2	9 (120 V)
		Modem output level	10 (220-240 V)
		DTMF output level (main value)	5 (120 V)
		DTMF output level (level difference)	10.5 (220-240 V)
	U660	Setting the NCU Setting the connection to PBX/PSTN Setting PSTN dial tone detection Setting busy tone detection Setting for a PBX Setting the loop current detection before dialing	PSTN ON ON LOOP ON
U670	Outputting lists	-	
U695	FAX function customize	ON/OFF	
U699	Setting the software switches	-	
Others	U910	Clearing the black ratio data	-
	U917	Setting backup data reading/writing	-
	U927	Clearing the all copy counts and machine life counts (one time only)	-
	U977	Data capture mode	-

	(10)	Unknown Toner Log	<p>#</p> <p>Remembers 1 to 5 of occurrence of unknown toner detection. If the occurrence of the previous unknown toner detection is less than 5, all of the unknown toner detection are logged.</p>	<p>Count.</p> <p>The total page count at the time of the [Toner Empty] error with using an unknown toner container.</p> <p>* :The toner replacement log is triggered by toner empty. This record may contain such a reference as the toner container is inserted twice or a used toner container is inserted.</p>	<p>Item</p> <p>Unknown toner log code (1 byte, 2 categories)</p> <p>First byte 01: Fixed (Toner container)</p> <p>Second byte 00: Fixed (Black)</p>

Item No.	Description			
U000	No.	Items	Description	
	(11)	Counter Log Comprised of three log counters including paper jams, self diagnostics errors, and replacement of the toner container.	(f) Paper jam Indicates the log counter of paper jams depending on location. Refer to Paper Jam Log. All instances including those are not occurred are displayed.	(g) Self diagnostic error Indicates the log counter of self diagnostics errors depending on cause. (See page 1-4-7) Example: C6000: 4 Self diagnostics error 6000 has happened four times.

Service items	Description	
	Detail of service status page	
	No.	Description
		Supplement
	(1)	Firmware version -
	(2)	System date -
	(3)	Engine soft version -
	(4)	Engine boot version -
	(5)	Operation panel mask version -
	(6)	Machine serial number -
	(7)	Standard memory size -
	(8)	Optional memory size -
	(9)	Total memory size -
	(10)	Local time zone -
	(11)	Report output date Day/Month/Year hour:minute
	(12)	NTP server name -
	(13)	Presence or absence of the document processor Installed/Not Installed
	(14)	Presence or absence of the optional paper feeder2 Installed/Not Installed
	(15)	Presence or absence of the optional paper feeder3 Installed/Not Installed
	(16)	Presence or absence of the optional memory card Installed/Not Installed
	(17)	Presence or absence of the card authentication kit (B) Installed/Not Installed
	(18)	Print setting Off/Auto Feed/Always
	(19)	Page of relation to the A4/Letter * :Print Coverage provides a close-matching reference of toner consumption and will not match with the actual toner consumption.
	(20)	Average coverage for total -
	(21)	Average coverage for copy -
	(22)	Average coverage for printer -
	(23)	Average coverage for fax -
	(24)	Cleared date and output date -
	(25)	Coverage on the final output page -
	(26)	Number of rings 0 to 15
	(27)	Number of rings before automatic switching 0 to 15
	(28)	Number of rings before connecting to answering machine 0 to 15

1-4-1 Paper misfeed detection

(1) Paper misfeed indication

When a paper misfeed occurs, the machine immediately stops printing and displays the paper misfeed message on the operation panel. To remove paper misfed in the machine, pull out the paper cassette, open the front cover, rear cover or duplexer's cover, or remove the drum unit.

Figure 1-4-1 Paper misfeed indication

(2) Paper misfeed detection condition

Figure 1-4-2

Code	Contents	Conditions	Jam location*
0100	Secondary paper feed request time out	Secondary paper feed request given by the controller is unreachable.	E
0101	Waiting for process package to be ready	Process package won't be ready.	E
0105	Registration sensor not detected	Activation of the registration sensor (on/off) is undetected for 90 s during printing.	
0107	Waiting for fuser package to be ready	Fuser package won't be ready.	E
0110	Upper cover open	The upper cover is opened during printing.	-
0501	No paper feed from cassette 1	The registration sensor (RS) does not turn on during paper feed from cassette 1.	A
0502	No paper feed from cassette 2	PF paper feed sensor 1 (PFPS1) does not turn on during paper feed from cassette 2 (Retry 1 times).	B
0503	No paper feed from cassette 3	PF paper feed sensor 2 (PFPS2) does not turn on during paper feed from cassette 3 (Retry 1 times).	C
0508	No paper feed from duplex section	The registration sensor (RS) does not turn on during paper feed from the duplex section.	F
0509	No paper feed from MP tray	The registration sensor (RS) does not turn on during paper feed from the MP tray.	D
0511	Multiple sheets in cassette 1	The registration sensor (RS) does not turn off during paper feed from cassette 1.	E
0512	Multiple sheets in cassette 2	PF paper feed sensor 1 (PFPS1) does not turn off during paper feed from cassette 2.	B

1413	PF paper feed sensor 1 stay jam	PF paper feed sensor 1 (PFPS1) does not turn off during paper feed from cassette 3.	F
1420		Paper remains at the PF paper feed sensor 1 (PFPS1) when power is turned on.	B
1620	PF paper feed sensor 2 stay jam	Paper remains at the PF paper feed sensor 2 (PFPS2) when power is turned on.	C
4002	Registration sensor non arrival jam	The registration sensor (RS) does not turn on during paper feed from cassette 2.	A
4003		The registration sensor (RS) does not turn on during paper feed from cassette 3.	A

*: Refer to figure 1-4-2 for paper jam location (see page 1-4-2).

Code	Contents	Conditions	Jam location*
4012	Registration sensor stay jam	The registration sensor (RS) does not turn off during paper feed from cassette 2.	E
4013		The registration sensor (RS) does not turn off during paper feed from cassette 3.	E
4020		When a power supply is turned on, the registration sensor (RS) does not turn off.	E
4201	Eject sensor non arrival jam	The eject sensor (ES) does not turn on during paper feed from cassette 1.	E
4202		The eject sensor (ES) does not turn on during paper feed from cassette 2.	E
4203		The eject sensor (ES) does not turn on during paper feed from cassette 3.	E
4208		The eject sensor (ES) does not turn on during paper feed from duplex section.	E
4209		The eject sensor (ES) does not turn on during paper feed from MP tray.	E
4211	Eject sensor stay jam	The eject sensor (ES) does not turn off during paper feed from cassette 1.	G
4212		The eject sensor (ES) does not turn off during paper feed from cassette 2.	G
4213		The eject sensor (ES) does not turn off during paper feed from cassette 3.	G
4218		The eject sensor (ES) does not turn off during paper feed from the duplex section.	G
4219		The eject sensor (ES) does not turn off during paper feed from the MP tray.	G
4220		Paper remains at the eject sensor (ES) when power is turned on.	G

*: Refer to figure 1-4-2 for paper jam location (see page 1-4-2).

Code	Contents	Conditions	Jam location*
4301	Duplex sensor non arrival jam	The eject sensor (ES) does not turn on after a switchback start, during paper feed from cassette 1.	G
4302		The eject sensor (ES) does not turn on after a switchback start, during paper feed from cassette 2.	G
4303		The eject sensor (ES) does not turn on after a switchback start, during paper feed from cassette 3.	G
4309		The eject sensor (ES) does not turn on after a switchback start, during paper feed from the MP tray.	G
4311	Duplex sensor stay jam	The eject sensor (ES) does not turn off after a switchback start, during paper feed from cassette 1.	F
4312		The eject sensor (ES) does not turn off after a switchback start, during paper feed from cassette 2.	F
4313		The eject sensor (ES) does not turn off after a switchback start, during paper feed from cassette 3.	F
4319		The duplex sensor (DUS) does not turn off after a switchback start, during paper feed from the MP tray.	F
9000	No paper feed from DP	DP timing sensor (DPTS) does not turn on during original feed from DP (Retry 5 times).	H
9001	DP original conveying jam	DP timing sensor (DPTS) turns off within the specified time since the sensor turns on.	H
9003	DP original switchback jam	During duplex switchback scanning, the DP timing sensor (DPTS) does not turn off within specified time.	H
9004		During duplex switchback scanning, the DP timing sensor (DPTS) does not turn on within specified time since original switchback operation starts.	H
9011	DP top cover open	The DP top cover is opened during original feeding.	H
9410	DP timing sensor stay jam	The DP timing sensor (DPTS) does not turned off within the specified time its turning on.	H

*: Refer to figure 1-4-2 for paper jam location (see page 1-4-2).

1-4-2 Self-diagnostic function

(1) Self-diagnostic function

This machine is equipped with self-diagnostic function. When a problem is detected, the machine stops printing and display an error message on the operation panel. An error message consists of a message prompting a contact to service personnel, total print count, and a four-digit error code indicating the type of the error.

(The display varies depending on the type of the error.)

Figure 1-4-3

(2) Self diagnostic codes

Code	Contents	Remarks	
		Causes	Check procedures /corrective measures
0030	FAX control PWB system error Processing with the fax software was disabled due to a hardware problem.	Defective FAX control PWB.	Replace the FAX control PWB (See page 1-5-48).
0070	FAX control PWB incompatible detection Error Abnormal detection of FAX control PWB incompatibility In the initial communication with the FAX control PWB, any normal communication command is not transmitted.	Defective fax software.	Install the fax software.
		Defective FAX control PWB.	Replace the FAX control PWB (See page 1-5-48).
0100	Backup memory device error	Defective flash memory.	Replace the control PWB (See page 1-5-37).
		Defective control PWB.	Replace the control PWB (See page 1-5-37).
0120	MAC address data error	Defective flash memory.	Replace the control PWB (See page 1-5-37).
0130	Backup memory read/write error	Defective flash memory.	Replace the control PWB (See page 1-5-37).
		Defective control PWB.	Replace the control PWB (See page 1-5-37).
0140	Backup memory data error	Defective flash memory.	Replace the control PWB (See page 1-5-37).
		Defective control PWB.	Replace the control PWB (See page 1-5-37).
0150	Control PWB EEPROM error Detecting control PWB EEPROM (U17) communication error.	Improper installation control PWB EEPROM (U17).	Check the installation of the EEPROM (U17) and remedy if necessary (See page 1-5-37).
		Defective control PWB.	Replace the control PWB (See page 1-5-37).
		Data damage of control PWB EEPROM (U17).	Contact the Service Administrative Division.
0170	Billing counting error	Defective control PWB.	Replace the control PWB (See page 1-5-37).
		Data damage of control PWB EEPROM (U17).	Contact the Service Administrative Division.

Code	Contents	Remarks	
		Causes	Check procedures /corrective measures
0180	Machine number mismatch Machine number of main and engine does not match.	The main PWB or the engine PWB were exchanged.	U004 Setting the machine number (See page 1-3-12).
		Data damage of control PWB EEPROM (U17).	Contact the Service Administrative Division.
0420	Paper feeder communication error Communication error between control PWB and optional paper feeder.	Improper installation paper feeder.	Follow installation instruction carefully again.
		Defective harness between control PWB (YC30) and paper feeder interface connector, or improper connector insertion.	Reinsert the connector. Also check for continuity within the connector harness. If none, remedy or replace the harness.
		Defective control PWB.	Replace the control PWB (See page 1-5-37).
		Defective harness between PF main PWB (YC5) and paper feeder interface connector, or improper connector insertion.	Reinsert the connector. Also check for continuity within the connector harness. If none, remedy or replace the harness (Refer to the service manual for the paper feeder).
		Defective PF mainPWB.	Replace the PF main PWB (Refer to the service manual for the paper feeder).
0830	FAX control PWB flash program area checksum error A checksum error occurred with the program of the FAX control PWB.	Defective fax software.	Install the fax software.
		Defective FAX control PWB.	Replace the FAX control PWB (See page 1-5-48).
0840	Faults of RTC The time is judged to go back based on the comparison of the RTC time and the current time or five years or more have passed.	Defective control PWB.	Replace the control PWB (See page 1-5-37).
		The battery is disconnected from the control PWB.	Check visually and remedy if necessary.

Code	Contents	Remarks	
		Causes	Check procedures /corrective measures
0870	FAX control PWB to control PWB high capacity data transfer problem High-capacity data transfer between the FAX control PWB and the control PWB of the machine was not normally performed even if the data transfer was retried the specified times.	Improper installation FAX control PWB.	Reinstall the FAX control PWB (See page 1-5-48).
		Defective FAX control PWB or control PWB.	Replace the FAX control PWB or control PWB and check for correct operation. (See page 1-5-48 or 1-5-37).
0920	Fax file system error The backup data is not retained for file system abnormality of flash memory of the FAX control PWB.	Defective FAX control PWB.	Replace the FAX control PWB (See page 1-5-48).
2000	Main motor error The main motor ready input is not given for 2 s during the main motor is ON.	Defective harness between main motor (CN1) and control PWB (YC17), or improper connector insertion.	Reinsert the connector. Also check for continuity within the connector harness. If none, remedy or replace the harness (See page 1-5-37).
		Defective drive transmission system of the main motor.	Check if the rollers and gears rotate smoothly. If not, grease the bushings and gears. Check for broken gears and replace if any.
		Defective main motor.	Replace the main motor (See page 1-5-49).
		Defective control PWB.	Replace the control PWB (See page 1-5-37).
2610	PF paper feed motor error (paper feeder) The PF paper feed motor of cassette 2 ready input is not given for 2 s during the PF paper feed motor is ON.	Defective harness between PF paper feed motor and PF main PWB (YC4), or improper connector insertion.	Reinsert the connector. Also check for continuity within the connector harness. If none, remedy or replace the harness (Refer to the service manual for the paper feeder).
		Defective PF paper feed motor drive transmission system.	Check if the gears rotate smoothly. If not, grease the bushings and gears. Check for broken gears and replace if any.
		Defective PF main motor.	Replace the PF main motor.
		Defective control PWB.	Replace the control PWB (See page 1-5-37).

Code	Contents	Remarks	
		Causes	Check procedures /corrective measures
2620	PF paper feed motor error (Paper feeder) The PF paper feed motor of cassette 3 ready input is not given for 2 s during the PF paper feed motor is ON.	Defective harness between PF paper feed motor and PF main PWB (YC4), or improper connector insertion.	Reinsert the connector. Also check for continuity within the connector harness. If none, remedy or replace the harness (Refer to the service manual for the paper feeder).
		Defective PF paper feed motor drive transmission system.	Check if the gears rotate smoothly. If not, grease the bushings and gears. Check for broken gears and replace if any.
		Defective PF main motor.	Replace the PF main motor (Refer to the service manual for the paper feeder).
		Defective control PWB.	Replace the control PWB (See page 1-5-37).
3100	ISU home position error	Defective FFC between CCD PWB (YC1) and control PWB (YC8).	Replace the image scanner unit (ISU) (See page 1-5-21).
		Defective FFC between control PWB (YC6) and scanner PWB (YC103), or improper FFC insertion.	Reinsert the FFC. Also check for continuity within the FFC. If none, remedy or replace the FFC.
		Defective home position sensor.	Replace the home position sensor.
		Defective harness between ISU motor and scanner PWB (YC104), or improper connector insertion.	Reinsert the connector. Also check for continuity within the connector harness. If none, remedy or replace the harness.
		Defective ISU motor.	Replace the ISU motor.

Code	Contents	Remarks	
		Causes	Check procedures /corrective measures
3200	Exposure lamp error The exposure lamp is not turned on.	Defective FFC between scanner PWB (YC103) and control PWB (YC6), or improper FFC insertion.	Reinsert the FFC. Also check for continuity within the FFC. If none, remedy or replace the FFC.
		Defective FFC between CCD PWB (YC1) and control PWB (YC8).	Replace the image scanner unit (ISU) (See page 1-5-21).
		Defective harness between CCD PWB (YC3) and LED drive PWB (YC1), or improper connector insertion.	Reinsert the connector. Also check for continuity within the connector harness. If none, remedy or replace the harness.
		Defective harness between LED drive PWB (YC2) and exposure lamp, or improper connector insertion.	Reinsert the connector. Also check for continuity within the connector harness. If none, remedy or replace the harness.
		Defective exposure lamp.	Replace the exposure lamp (See page 1-5-27).
		Defective LED drive PWB.	Replace the LED drive PWB (See page 1-5-27).
		Defective control PWB.	Replace the control PWB (See page 1-5-37).
3300	AGC error After AGC, correct input is not obtained at CCD.	Defective FFC between CCD PWB (YC1) and control PWB (YC8).	Replace the image scanner unit (ISU) (See page 1-5-21).
		Defective exposure lamp.	Replace the exposure lamp (See page 1-5-27).
		Defective CCD PWB.	Replace the CCD PWB.
		Defective control PWB.	Replace the control PWB (See page 1-5-37).

Code	Contents	Remarks	
		Causes	Check procedures /corrective measures
3500	CPU - ASIC (CCD PWB) communication error An error code is detected.	Defective FFC between CCD PWB (YC1) and control PWB (YC8).	Replace the image scanner unit (ISU) (See page 1-5-21).
		Defective CCD PWB.	Replace the CCD PWB.
		Defective control PWB.	Replace the control PWB (See page 1-5-37).
4000	Polygon motor (laser scanner unit) error The polygon motor ready input is not given for 6 s during the polygon motor is ON.	Defective harness between polygon motor and control PWB (YC10), or improper connector insertion.	Reinsert the connector. Also check for continuity within the connector harness. If none, remedy or replace the harness.
		Defective laser scanner unit.	Replace the laser scanner unit (See page 1-5-17).
		Defective control PWB.	Replace the control PWB (See page 1-5-37).
4200	BD error (laser scanner unit) error	BD sensor does not detect laser beam due to condensation on the polygon mirror.	Turn machine power off for at least 30 minutes, then turn machine on again. If not cured, replace the laser scanner unit (See page 1-5-17).
		Defective laser scanner unit.	Replace the laser scanner unit (See page 1-5-17).
		Defective control PWB.	Replace the control PWB (See page 1-5-37).
4700	VIDEO ASIC device error Mismatch of reading data from two locations occurs eight times successively. Mismatch between writing data and reading data occurs eight times successively.	Defective connector cable or poor contact in the connector.	Reinsert the connector. Also check for continuity within the connector cable. If none, replace the cable.
		Defective control PWB.	Replace the control PWB (See page 1-5-37).

Code	Contents	Remarks	
		Causes	Check procedures /corrective measures
6000	Broken Fuser heater wire The fuser temperature does not rise after the Fuser heater has been turned on.	Poor contact in the fuser thermistor connector terminals.	Reinsert the connector (See page 1-5-32).
		Poor contact in the Fuser heater connector terminals.	Reinsert the connector (See page 1-5-32).
		Fuser thermistor installed incorrectly.	Replace the fuser unit (See page 1-5-32).
		Fuser thermal cutout triggered.	Replace the fuser unit (See page 1-5-32).
		Fuser heater installed incorrectly.	Replace the fuser unit (See page 1-5-32).
		Broken Fuser heater wire.	Replace the fuser unit (See page 1-5-32).
6020	Abnormally high fuser thermistor temperature Fuser thermistor detects abnormally temperature. When the temperature of a fuser thermistor detects 195 °C or more at the time of heater OFF and 155 °C or more.	Shorted fuser thermistor.	Replace the fuser unit (See page 1-5-32).
		Defective control PWB.	Replace the control PWB (See page 1-5-37).
6030	Broken fuser thermistor wire Input from fuser thermistor is 0 (A/D value).	Poor contact in the fuser thermistor connector terminals.	Reinsert the connector (See page 1-5-32).
		Broken fuser thermistor wire.	Replace the fuser unit (See page 1-5-32).
		Fuser thermistor installed incorrectly.	Replace the fuser unit (See page 1-5-32).
		Fuser thermal cutout triggered.	Replace the fuser unit (See page 1-5-32).
		Fuser heater installed incorrectly.	Replace the fuser unit (See page 1-5-32).
		Broken Fuser heater wire.	Replace the fuser unit (See page 1-5-32).

Code	Contents	Remarks	
		Causes	Check procedures /corrective measures
6400	Zero cross signal error The zero cross signal does not reach the control PWB for specified time.	Defective harness between high voltage PWB (CN202) and control PWB (YC23), or improper connector insertion.	Reinsert the connector. Also check for continuity within the connector harness. If none, remedy or replace the harness (See page 1-5-37).
		Defective connection between power source PWB (YC103) and high voltage PWB (CN201).	Reinsert the connector.
		Defective power source PWB.	Replace the power source PWB (See page 1-5-40).
		Defective control PWB.	Replace the control PWB (See page 1-5-37).
7990	Waste toner full The waste toner sensor has detected that the waste toner reservoir (drum unit) is full.	Waste toner reservoir (drum unit) is full.	Turn the power switch off/on to restart the machine. If the error is not resolved, replace the drum unit (See page 1-5-28).
		Defective waste toner sensor.	Replace the waste toner sensor.
		Defective control PWB.	Replace the control PWB (See page 1-5-37).

Code	Contents	Remarks	
		Causes	Check procedures /corrective measures
F000	Control PWB - Operation panel PWB communication error	Defective harness between operation panel PWB (YC1) and control PWB (YC7), or improper connector insertion.	Reinsert the connector. Also check for continuity within the connector harness. If none, remedy or replace the harness.
		Defective operation panel PWB.	Replace the operation panel PWB.
		Defective control PWB.	Replace the control PWB (See page 1-5-37).
F020	Control PWB RAM checksum error	Defective main memory (RAM) on the control PWB.	Turn the power switch off/on to restart the machine. If the error is not resolved, replace control PWB (See page 1-5-37).
		Defective expanded memory (DIMM).	Replace the expanded memory (DIMM).
F040	Control PWB engine communication error A communication error is detected.	Defective control PWB.	Turn the power switch off/on to restart the machine. If the error is not resolved, replace control PWB (See page 1-5-37).
F041	Control PWB - scanner PWB communication error A communication error is detected.	Defective control PWB or scanner PWB.	Turn the power switch off/on to restart the machine. If the error is not resolved, replace control PWB or scanner PWB (See page 1-5-37 or 1-5-47).
F050	Control PWB engine checksum error	Some error may have occurred when downloading the firmware of the control PWB.	Download the firmware of the control PWB again (See page 1-6-1).
		Defective control PWB.	Turn the power switch off/on to restart the machine. If the error is not resolved, replace control PWB (See page 1-5-37).
F186	Control PWB video data control error	Defective control PWB.	Turn the power switch off/on to restart the machine. If the error is not resolved, replace control PWB (See page 1-5-37).

1-4-3 Image formation problems

(1) Completely blank printout.

See page 1-4-17

(2) All-black print-out.

See page 1-4-18

(3) Dropouts.

See page 1-4-18

(4) Black dots.

See page 1-4-19

(5) Black horizontal streaks.

See page 1-4-19

(6) Black vertical streaks.

See page 1-4-19

(7) Unsharpness.

See page 1-4-20

(8) Gray background.

See page 1-4-20

(9) Dirt on the top edge or back of the paper.

See page 1-4-20

(10) Undulated printing at the right edge (scanning start position).

See page 1-4-21

(1) Completely blank printout.

Print example	Causes	Check procedures/corrective measures
	Connection failure with DP connector.	<p>If a blank copy is made because the original loaded in the DP is not fed after the Start key is pressed: Turn the power switch off, investigate the DP connector connection, and firmly connect the DP connector.</p> 
	Defective drum unit or developer unit.	<p>Open the front cover and check that the drum unit and developer unit are correctly seated (See page 1-5-28 and 1-5-27). Investigate that the terminals between the main charger unit and the drum unit are not in loose contact (See page 1-5-28)</p>
	Defective transfer bias output or developer bias output.	Replace the high voltage PWB (See page 1-5-43).
	<p>Poor contact of developer bias terminal (spring) and high voltage output terminal B (J401, J402, J403) on the high voltage PWB.</p> <p>Poor contact of transfer bias terminal (spring) and transfer bias terminal T (J201, J202, J203) on the high voltage PWB.</p>	Check the high voltage PWB visually and correct or replace if necessary (See page 1-5-43).
	Defective laser scanner unit.	Replace the laser scanner unit (See page 1-5-17).
	Defective control PWB.	Replace the control PWB (See page 1-5-37).

(2) All-black printout.

Print example	Causes	Check procedures/corrective measures
	Defective main charger unit.	Open the front cover and check that the drum unit and developer unit are correctly seated (See page 1-5-28 and 1-5-27). Investigate that the terminals between the main charger unit and the drum unit are not in loose contact (See page 1-5-28)
	Poor contact of main charger terminal (spring) and main charger output terminal M on the high voltage PWB.	Check the high voltage PWB visually and correct or replace if necessary (See page 1-5-43).
	Defective main charging output.	Replace the high voltage PWB (See page 1-5-43).
	Broken main charger wire.	Replace the main charger unit (See page 1-5-29).
	Defective control PWB.	Replace the control PWB (See page 1-5-37).

(3) Dropouts.

Print example	Causes	Check procedures/corrective measures
	Defective developer roller (developer unit).	If the defects occur at regular intervals of 62.8 mm/2 1/2" (See page 2-4-3), the problem may be the damaged developer roller (in the developer unit). Replace the developer unit (See page 1-5-27).
	Defective drum unit.	If the defects occur at regular intervals of 94 mm/3 11/16" (See page 2-4-3), the problem may be the damaged drum (in the drum unit). Replace the drum unit (See page 1-5-28).
	Defective fuser unit (heat roller or press roller).	If the defects occur at regular intervals of 73.162 mm/ 2 7/8", or 78.5 mm/3 1/16" (See page 2-4-3), the problem may be the damaged heat roller or press roller (in the fuser unit). Replace fuser unit (See page 1-5-32).
	Defective paper specifications.	Paper with rugged surface or dump tends to cause dropouts. Replace paper with the one that satisfies the paper specifications.
	Defective transfer roller installation.	The transfer roller must be supported by the bushes at the both ends. Clean the bush to remove oil and debris. Replace the transfer roller if necessary (See page 1-5-30).
	Defective transfer bias output.	Replace the high voltage PWB or control PWB (See page 1-5-43 or 1-5-37).

(4) Black dots.

Print example	Causes	Check procedures/corrective measures
	Defective drum unit or developer unit.	If the defects occur at regular intervals of 94 mm/3 11/16" (See page 2-4-3), the problem may be the damaged drum (in the drum unit). Replace drum unit (See page 1-5-28). If the defects occur at random intervals, the toner may be leaking from the developer unit or drum unit. Replace the developer unit or drum unit (See page 1-5-27 or 1-5-28).

(5) Black horizontal streaks.

Print example	Causes	Check procedures/corrective measures
	Defective drum unit's ground.	Check that the drum shaft and the grounding tab (machine) are in good contact. Apply the grounding tab a small amount of electroconductive grease as required.
	Defective drum unit.	Replace the drum unit (See page 1-5-28).

(6) Black vertical streaks.

Print example	Causes	Check procedures/corrective measures
	Adhesion of oxide to main charger wire.	Remove the drum unit (See page 1-5-28). Slide the charger cleaner (green) left and right 2 or 3 times to clean the charger wire, then return it to its original position (CLEANER HOME POSITION). Refer to the operation guide.
	Defective drum unit.	A streak of toner remaining on drum after printing means that the cleaning blade (in the drum unit) is not working properly. Replace the drum unit (See page 1-5-28).
	Defective developer roller (developer unit).	Replace the developer unit (See page 1-5-27).

(7) Unsharpness.

Print example	Causes	Check procedures/corrective measures
	Defective paper specifications.	Replace paper with the one that satisfies the paper specification.
	Defective transfer roller installation.	The transfer roller must be supported by the bushes at the both ends. Clean the bush to remove oil and debris. Replace the transfer roller if necessary (See page 1-5-30).
	Defective transfer bias output.	Replace the high voltage PWB or control PWB (See page 1-5-43 or 1-5-37).
	EcoPrint mode setting.	The EcoPrint mode can provides faint, unsharp printing because it acts to conserve toner for draft printing purpose. For normal printing, turn the EcoPrint mode off by using the operator panel. For details, refer to the operation guide.

(8) Gray background.

Print example	Causes	Check procedures/corrective measures
	Print density setting.	The print density may be set too high. Try adjusting the print density. For details, refer to the operation guide.
	Defective potential on the drum surface.	Replace the drum unit (See page 1-5-28).
	Defective main charger grid.	Clean the main charger grid (See page 1-5-29).
	Defective developer roller (developer unit).	If a developer unit which is known to work normally is available for check, replace the current developer unit in the machine with the normal one. If the symptom disappears, replace the developer unit with a new one (See page 1-5-27).

(9) Dirt on the top edge or back of the paper.

Print example	Causes	Check procedures/corrective measures
	Toner contamination in various parts.	Dirty edges and back of the paper can be caused by toner accumulated on such parts as the paper chute guide, paper conveying paths, the bottom of the drum and developer unit, and the fuser unit inlet. Clean these areas and parts to remove toner.
	Defective transfer roller.	If the transfer roller is contaminated with toner, clean the transfer roller using a vacuum cleaner or by continuously printing a low density page until the symptom has faded away.

(10) Undulated printing at the right edge (scanning start position).

Print example	Causes	Check procedures/corrective measures
 <p>This vertical line should be straight.</p>	Defective polygon motor (laser scanner unit).	Replace the laser scanner unit (See page 1-5-17).
	Defective control PWB.	Replace the control PWB (See page 1-5-37).

1-4-4 Electric problems

Problem	Causes	Check procedures/corrective measures
(1)The machine does not operate when the power switch is turned on.	1. No electricity at the power outlet.	Measure the input voltage.
	2. The power cord is not plugged in properly.	Check the contact between the power plug and the outlet.
	3. The top cover is not closed completely.	Check the top cover.
	4. Broken power cord.	Check for continuity. If none, replace the cord.
	5. Defective power switch.	Check for continuity across the contacts. If none, replace the power source PWB (See page 1-5-40).
	6. Blown fuse in the power source PWB.	Check for continuity. If none, remove the cause of blowing and replace the power source PWB (See page 1-5-40).
	7. Defective interlock switch.	Check for continuity across the contacts of interlock switch. If none, replace the power source PWB (See page 1-5-40).
	8. Defective power source PWB.	Replace the power source PWB (See page 1-5-40).
	9. Defective control PWB.	Replace the control PWB (See page 1-5-37).
(2)Right cooling fan motor does not operate.	1. Broken right cooling fan motor coil.	Check for continuity across the coil. If none, replace the right cooling fan motor.
	2. Defective harness between right cooling fan motor and control PWB (YC27), or improper connector insertion.	Reinsert the connector. Also check for continuity within the connector harness. If none, remedy or replace the harness.
	3. Defective control PWB.	Replace the control PWB (See page 1-5-37).
(3)Left cooling fan motor does not operate.	1. Broken left cooling fan motor coil.	Check for continuity across the coil. If none, replace the left cooling fan motor.
	2. Defective harness between left cooling fan motor and control PWB (YC104), or improper connector insertion.	Reinsert the connector. Also check for continuity within the connector harness. If none, remedy or replace the harness.
	3. Defective control PWB.	Replace the control PWB (See page 1-5-37).

Problem	Causes	Check procedures/corrective measures
(4)Registration clutch does not operate.	1. Broken registration clutch coil.	Check for continuity across the coil. If none, replace the registration clutch.
	2. Defective harness between registration clutch and control PWB (YC20), or improper connector insertion.	Reinsert the connector. Also check for continuity within the connector harness. If none, remedy or replace the harness.
	3. Defective control PWB.	Replace the control PWB (See page 1-5-37).
(5)Paper feed clutch does not operate.	1. Broken paper feed clutch coil.	Check for continuity across the coil. If none, replace the paper feed clutch.
	2. Defective harness between paper feed clutch and control PWB (YC20), or improper connector insertion.	Reinsert the connector. Also check for continuity within the connector harness. If none, remedy or replace the harness.
	3. Defective control PWB.	Replace the control PWB (See page 1-5-37).
(6)Developer clutch does not operate.	1. Broken developer clutch coil.	Check for continuity across the coil. If none, replace the developer clutch.
	2. Defective harness between developer clutch and control PWB (YC20), or improper connector insertion.	Reinsert the connector. Also check for continuity within the connector harness. If none, remedy or replace the harness.
	3. Defective control PWB.	Replace the control PWB (See page 1-5-37).
(7)MP paper feed solenoid does not operate.	1. Broken MP paper feed solenoid coil.	Check for continuity across the coil. If none, replace the MP paper feed solenoid.
	2. Defective harness between MP paper feed solenoid and control PWB (YC21), or improper connector insertion.	Reinsert the connector. Also check for continuity within the connector harness. If none, remedy or replace the harness.
	3. Defective control PWB.	Replace the control PWB (See page 1-5-37).

Problem	Causes	Check procedures/corrective measures
(8) Duplex solenoid does not operate.	1. Broken duplex solenoid coil.	Check for continuity across the coil. If none, replace the duplex solenoid.
	2. Defective harness between duplex solenoid and control PWB (YC29), or improper connector insertion.	Reinsert the connector. Also check for continuity within the connector harness. If none, remedy or replace the harness.
	3. Defective control PWB.	Replace the control PWB (See page 1-5-37).
(9) Cleaning lamp does not turn on.	1. Defective harness between cleaning lamp (YC701) and control PWB (YC28), or improper connector insertion.	Reinsert the connector. Also check for continuity within the connector harness. If none, remedy or replace the harness.
	2. Defective cleaning lamp (PWB).	Replace the cleaning lamp (PWB).
	3. Defective control PWB.	Replace the control PWB (See page 1-5-37).
(10) Paper indicator is flashing when paper is present in the cassette.	1. Defective paper sensor.	Replace the paper sensor.
	2. Defective harness between paper sensor and control PWB (YC18), or improper connector insertion.	Reinsert the connector. Also check for continuity within the connector harness. If none, remedy or replace the harness.
(11) A paper jam in the paper feed/ conveying section or fuser section is indicated when the main power switch is turned on.	1. A piece of paper torn from paper is caught around registration sensor or exit sensor.	Check and remove if any.
	2. Defective registration sensor on the high voltage PWB.	Replace the high voltage PWB (See page 1-5-43).
	3. Defective exit sensor.	Replace the exit sensor.
(12) Attention indicator is lit when the front cover is closed.	1. Defective interlock switch on the power source PWB.	Check for continuity across the interlock switch. If there is no continuity when the interlock switch is on, replace the power source PWB (See page 1-5-40).
(13) When the trouble occurs in the DP.	-	Refer to the DP's service manual.

1-4-5 Mechanical problems

Problem	Causes/check procedures	Corrective measures
(1)No primary paper feed.	Check if the surfaces of the paper feed roller is dirty with paper powder.	Clean with isopropyl alcohol.
	Check if the paper feed roller is deformed.	Check visually and replace any deformed paper feed roller (assembly) (See page 1-5-6).
	Defective paper feed clutch installation.	Check visually and remedy if necessary.
(2)No secondary paper feed.	Check if the surfaces of the upper and lower registration rollers are dirty with paper powder.	Clean with isopropyl alcohol.
	Defective registration clutch installation.	Check visually and remedy if necessary.
(3)Skewed paper feed.	Paper width guide in a cassette installed incorrectly.	Check the paper width guide visually and correct or replace if necessary.
(4)Multiple sheets of paper are fed at one time.	Check if the separator pad or MPF separation pad is worn.	Replace the separator pad if it is worn.
	Check if the paper is curled.	Replace the paper.
(5)Paper jams.	Check if the paper is excessively curled.	Replace the paper.
	Check if the contact between the upper and lower registration rollers is correct.	Check visually and remedy if necessary.
	Check if the heat roller or press roller is extremely dirty or deformed.	Replace the fuser unit (See page 1-5-32).
	Check if the contact between the ejection roller and fuser ejection pulley is correct.	Check visually and remedy if necessary.
(6)Toner drops on the paper conveying path.	Check if the drum unit or developer unit is extremely dirty.	Clean the drum unit or developer unit (See page 1-5-28 or 1-5-27).
(7)Abnormal noise is heard.	Check if the pulleys, rollers and gears operate smoothly.	Grease the bearings and gears.
	Check if the following electromagnetic clutches are installed correctly: Paper feed clutch, registration clutch and developer clutch.	Check visually and remedy if necessary.
(8)When the trouble occurs in the DP.		Refer to the DP's service manual.

1-4-6 Send error code

This section describes the scanning errors and descriptions, preventive actions, as well as corrective actions. Error codes not described here could fall within software errors.

If such an error is encountered, turn power off then on, and advise the service representative.

(1) Scan to SMB error codes

Code	Contents	Check procedures/corrective measures
1101	Host destined does not exist on the network.	<ol style="list-style-type: none"> 1. Confirm the destined host. 2. Confirm the device's network parameters. 3. Confirm the parameters of the network to which the device is connected are correct.
1102	Login to the host has failed.	<ol style="list-style-type: none"> 1. Confirm user name and password. 2. Confirm the parameters of the network to which the device is connected are correct. 3. Check the host if the folder is properly shared.
1103	Destined host, folder, and/or file names are invalid.	<ol style="list-style-type: none"> 1. Check illegal characters are not contained within these names. 2. Check the name of the folder and files conform with the naming syntax. 3. Confirm destined host and folder.
1105	SMB protocol is not enabled.	<ol style="list-style-type: none"> 1. Confirm device's SMB protocols.
2101	Login to the host has failed.	<ol style="list-style-type: none"> 1. Confirm the destined host. 2. Confirm that the LAN cable is properly connected to the device. 3. Check the SMB port number. 4. Confirm the device's network parameters. 5. Confirm the parameters of the network to which the device is connected are correct.
2201	Writing scanned data has failed.	<ol style="list-style-type: none"> 1. Check the file name to save the scanned data. 2. Confirm the device's network parameters. 3. Confirm the parameters of the network to which the device is connected are correct.
2203	No response from the host during a certain period of time.	<ol style="list-style-type: none"> 1. Confirm the network parameters the device is connected. 2. Confirm that the LAN cable is properly connected to the device.

(2) Scan to FTP error codes

Code	Contents	Check procedures/corrective measures
1101	FTP server does not exist on the network.	<ol style="list-style-type: none"> 1. Check the FTP server name. 2. Confirm device's network parameters. 3. Confirm the parameters of the network to which the device is connected are correct.
1102	Login to the FTP server has failed.	<ol style="list-style-type: none"> 1. Confirm user name and password. 2. Check the FTP server name.
1103	Destined folder is invalid.	<ol style="list-style-type: none"> 1. Check that the illegal characters are not contained within these names. 2. Check the FTP server name.
1105	FTP protocol is not enabled.	<ol style="list-style-type: none"> 1. Confirm device's FTP protocols.
1131	Initializing TLS has failed.	<ol style="list-style-type: none"> 1. Confirm device's security parameters.
1132	TLS negotiation has failed.	<ol style="list-style-type: none"> 1. Confirm device's security parameters. 2. Check the FTP server name.
2101	Access to the FTP server has failed.	<ol style="list-style-type: none"> 1. Check the FTP server name. 2. Confirm that the LAN cable is properly connected to the device. 3. Check the FTP port number. 4. Confirm device's network parameters. 5. Confirm the network parameters the device is connected. 6. Check the FTP server name.
2102	Access to the FTP server has failed. (Connection timeout)	<ol style="list-style-type: none"> 1. Check the FTP server name. 2. Check the FTP port number. 3. Confirm device's network parameters. 4. Confirm the network parameters the device is connected. 5. Check the FTP server name.
2103	The server cannot establish communication.	<ol style="list-style-type: none"> 1. Check the FTP server name. 2. Check the FTP port number. 3. Confirm device's network parameters. 4. Confirm the network parameters the device is connected. 5. Check the FTP server name.
2201	Connection with the FTP server has failed.	<ol style="list-style-type: none"> 1. Confirm device's network parameters. 2. Confirm the network parameters the device is connected. 3. Confirm destined folder. 4. Check the FTP server name.
2202	Connection with the FTP server has failed. (Timeout)	<ol style="list-style-type: none"> 1. Confirm device's network parameters. 2. Confirm the network parameters the device is connected.
2203	No response from the server during a certain period of time.	<ol style="list-style-type: none"> 1. Confirm device's network parameters. 2. Confirm the network parameters the device is connected.

Code	Contents	Check procedures/corrective measures
2231	Connection with the FTP server has failed. (FTPS communication)	<ol style="list-style-type: none">1. Confirm device's network parameters.2. Confirm the network parameters the device is connected.
3101	FTP server responded with an error.	<ol style="list-style-type: none">1. Confirm device's network parameters.2. Confirm the network parameters the device is connected.3. Check the FTP server.

(3) Scan to E-mail error codes

Code	Contents	Check procedures/corrective measures
1101	SMTP/POP3 server does not exist on the network.	<ol style="list-style-type: none"> 1. Check the SMTP/POP3 server name. 2. Confirm device's network parameters. 3. Confirm the parameters of the network to which the device is connected are correct.
1102	Login to the SMTP/POP3 server has failed.	<ol style="list-style-type: none"> 1. Confirm user name and password. 2. Check the SMTP/POP3 server.
1104	The domain the destined address belongs is prohibited by scanning restriction.	<ol style="list-style-type: none"> 1. Confirm device's SMTP parameters.
1105	SMTP protocol is not enabled.	<ol style="list-style-type: none"> 1. Confirm device's SMTP protocols.
1106	Sender's address is not specified.	<ol style="list-style-type: none"> 1. Confirm device's SMTP protocols.
2101	Connection to the SMTP/POP3 server has failed.	<ol style="list-style-type: none"> 1. Check the SMTP/POP3 server name. 2. Confirm that the LAN cable is properly connected to the device. 3. Check the SMTP/POP3 port number. 4. Confirm device's network parameters. 5. Confirm the network parameters the device is connected. 6. Check the SMTP/POP3 server.
2102	Connection to the SMTP/POP3 server has failed. (Connection timeout)	<ol style="list-style-type: none"> 1. Check the SMTP/POP3 server name. 2. Check the SMTP/POP3 port number. 3. Confirm device's network parameters. 4. Confirm the network parameters the device is connected. 5. Check the SMTP/POP3 server.
2103	The server cannot establish communication.	<ol style="list-style-type: none"> 1. Check the SMTP/POP3 server name. 2. Check the SMTP/POP3 port number. 3. Confirm device's network parameters. 4. Confirm the network parameters the device is connected. 5. Check the SMTP/POP3 server.
2201	Connection to the SMTP/POP3 server has failed.	<ol style="list-style-type: none"> 1. Confirm device's network parameters. 2. Confirm the network parameters the device is connected.
2202	Connection to the SMTP/POP3 server has failed. (Timeout)	<ol style="list-style-type: none"> 1. Confirm device's network parameters. 2. Confirm the network parameters the device is connected.
2204	The size of scanning exceeded its limit.	<ol style="list-style-type: none"> 1. Confirm device's network parameters.
3101	SMTP/POP3 server responded with an error.	<ol style="list-style-type: none"> 1. Confirm device's network parameters. 2. Confirm the network parameters the device is connected. 3. Check the SMTP/POP3 server.
3201	No SMTP authentication is found.	<ol style="list-style-type: none"> 1. Check the SMTP server. 2. The device supports SMTP authentication services including CRAM-MD5, DIGEST-MD5, PLAIN and LOGIN.

Code	Contents	Check procedures/corrective measures
4803	Failed to establish the SSL session.	<ol style="list-style-type: none">1. Verify the self certificate of the device.2. Check the server certificate of the SMTP/POP3 server.3. Check the SMTP/POP3 configuration of the device and the SMTP/POP3 server.

1-4-7 Error codes

(1) Error code

Error codes are listed on the communication reports, activity report, etc. The codes consist of an error code indication U followed by a 5-digit number. (Error codes for V34 communication errors start with an E indication, followed by five digits.)

The upper three of the five digits indicate general classification of the error and its cause, while the lower two indicate the detailed classification. Items for which detailed classification is not necessary have 00 as the last two digits.

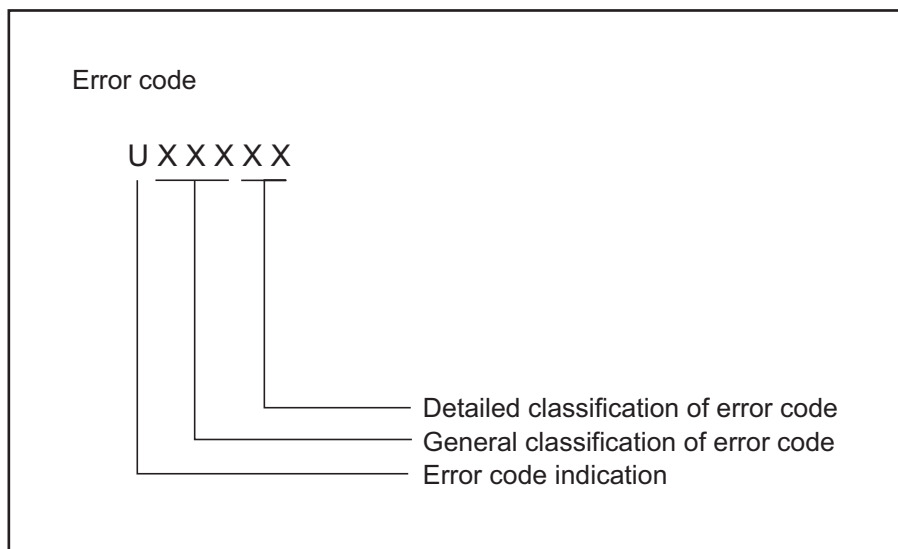

Figure 1-4-4

(2) Table of general classification

Error code	Description
U00000	No response or busy after the set number of redials.
U00100	Transmission was interrupted by a press of the stop/clear key.
U00200	Reception was interrupted by a press of the stop/clear key.
U00300	Recording paper on the destination unit has run out during transmission.
U004XX	A connection was made but interrupted during handshake with the receiver unit (See page 1-4-35).
U00500	Multiple communication was interrupted and call was not made on destination units after interruption.
U006XX	Communication was interrupted because of a machine problem (See page 1-4-36).
U00700	Communication was interrupted because of a problem in the destination unit.
U008XX	A page transmission error occurred in G3 mode (See page 1-4-36).
U009XX	A page reception error occurred in G3 mode (See page 1-4-36).
U010XX	Transmission in G3 mode was interrupted by a signal error (See page 1-4-37).
U011XX	Reception in G3 mode was interrupted by a signal error (See page 1-4-39).
U01400	An invalid one-touch key was specified during communication.
U01500	A communication error occurred when calling in V.8 mode.
U01600	A communication error occurred when called in V.8 mode.
U017XX	A communication error occurred before starting T.30 protocol during transmission in V.34 mode (See page 1-4-40).
U018XX	A communication error occurred before starting T.30 protocol during reception in V.34 mode (See page 1-4-41).
U02000	Relay broadcast was refused by a relay station because of a mismatch in permit ID number and permit telephone number when a relay command was issued.
U02100	A relay command failed because the destination unit (relay station) had no relay broadcast capability.
U02200	A relay command from a command station failed because a telephone number that was not registered in the relay station was specified. Or, relay broadcast was requested to a relay station but failed because a telephone number that was not registered in the relay station was specified. Or, Subaddress-based relay broadcast transmission failed because the data registered in the Subaddress relay box was deleted.
U023XX	Receiving station information was not normally received in reception of a relay command (See page 1-4-41).
U02400	An interoffice subaddress-based relay transmission was interrupted because of a mismatch in the specified relay box number.
U03000	No document was present in the destination unit when polling reception started.
U03100	In reverse polling, although no original was set in the destination unit, transmission was complete.
U03200	In confidential polling reception, data was not accumulated in the specified box in the destination unit. Or, in interoffice subaddress-based bulletin board reception, data was not stored in the box specified by the destination unit.

Error code	Description
U03300	In polling reception from a unit of our make, operation was interrupted due to a mismatch in permit ID or telephone number. Or, in interoffice subaddress-based bulletin board reception, operation was interrupted due to a mismatch in permit ID or telephone number.
U03400	Polling reception was interrupted because of a mismatch in individual numbers (destination unit is either of our make or by another manufacturer).
U03500	In confidential polling reception, the specified confidential box No. was not registered in the destination. Or, in interoffice subaddress-based bulletin board reception, the specified Subaddress confidential box number was not registered in the destination unit. Or, the destination was being accessed.
U03600	Confidential polling reception was interrupted because of a mismatch in specified confidential box No. Or, an interoffice subaddress-based bulletin board reception was interrupted because of a mismatch in the specified subaddress confidential box number.
U03700	Confidential polling reception failed because the destination unit had no confidential polling transmission capability or data was not accumulated in any box in the destination unit. Or, interoffice subaddress-based bulletin board reception failed because the destination unit had no subaddress-based bulletin board transmission capability, or data was not stored in any subaddress confidential box in the destination unit.
U04000	The confidential box specified for confidential transmission was not registered in the destination unit. Or, in interoffice subaddress-based transmission mode, the specified subaddress box number was not registered in the destination unit. Or, the destination was being accessed.
U04100	Confidential transmission failed because the destination unit had no confidential capability. Or, subaddress-based transmission failed because the destination unit had no subaddress-based reception capability.
U04200	In encrypted transmission, the specified encryption box was not registered in the destination unit.
U04300	Encrypted transmission failed because the destination unit had no encrypted communication capability.
U044XX	Communication was interrupted because of an encryption key error during encrypted transmission (See page 1-4-41).
U04500	Encrypted reception was interrupted because of a mismatch in encryption keys.
U05000	In transmission with a specified number, the set number of originals was different from the number of transmitted originals.
U05100	Password check transmission or restricted transmission was interrupted because the permit ID's did not agree with.
U05200	Password check reception or restricted reception was interrupted because the permit ID's did not match, the rejected FAX number's did match, or the destination receiver did not return its phone number.
U05300	The password check reception or the restricted reception was interrupted because the permitted numbers did not match, the rejected numbers did match, or the machine in question did not acknowledge its phone number.
U09000	G3 communication was attempted but failed because the destination unit was a G2 machine.

Error code	Description
U12000	Relay broadcast was requested from a command station but memory overflowed during reception. Or, in subaddress-based relay reception, memory overflowed.
U12100	Relay was commanded but memory overflowed in the destination unit (relay station).
U14000	Memory overflowed during confidential reception. Or, in subaddress-based confidential reception, memory overflowed.
U14100	Memory overflowed in the destination unit during confidential transmission. Or, in interface subaddress-based transmission, memory overflowed in the destination unit.
U19000	Memory overflowed during memory reception.
U19100	Memory overflowed in the destination unit during transmission.
U19200	Memory transmission failed because a decoding error occurred.
U19300	Transmission failed because an error occurred during JBIG encoding.
U19400	Reception failed because an error occurred during JBIG decoding.

(2-1) U004XX error code table: Interrupted phase B

Error code	Description
U00420	A relay request was received from the host center but interrupted because of a mismatch in permit ID or telephone number.
U00421	Subaddress-based relay reception was interrupted because of a mismatch in the specified subaddress relay box number.
U00430	Polling request (confidential or reverse) was received but interrupted because of a mismatch in permit number. Or, subaddress-based bulletin board transmission request was received but interrupted because of a mismatch in permit ID in the transmitting unit.
U00431	Confidential polling transmission was interrupted because the specified confidential box No. was not registered. Or, an subaddress-based bulletin board transmission was interrupted because the specified subaddress confidential box was not registered.
U00432	Confidential polling transmission was interrupted because of a mismatch in confidential box ID number. Or, an subaddress-based bulletin board transmission was interrupted because of a mismatch in Subaddress confidential box numbers.
U00433	Confidential polling request was received but data was not present in the confidential box. Or, subaddress-based bulletin board transmission request was received but data was not present in the subaddress confidential box.
U00434	Confidential polling request was received but interrupted because the specified confidential box No. was intended for encryption.
U00435	Confidential polling request was received but interrupted because the specified confidential box was being accessed. Or, subaddress-based bulletin board transmission request was received but interrupted because the specified subaddress confidential box was being accessed.
U00440	Confidential reception was interrupted because the specified confidential box No. was not registered. Or, subaddress-based confidential reception or subaddress-based relay reception was interrupted because the specified subaddress box was not registered. Or, subaddress based confidential reception or subaddress relay command reception was interrupted because the specified subaddress box No. was being accessed.
U00441	Confidential reception was interrupted because the specified confidential box No. was intended for encryption.
U00450	The destination transmitter disconnected because the permit ID's did not agree with while the destination transmitter is in password-check transmission or restricted transmission.
U00460	Encrypted reception was interrupted because the specified encryption box number was not registered. Or, encrypted reception request was received but interrupted because the specified encryption box was being accessed.
U00462	Encrypted reception was interrupted because the encryption key for the specified encryption box was not registered.

(2-2) U006XX error code table: Problems with the unit

Error code	Description
U00600	The document processor cover is open.
U00601	Document jam or the document length exceeds the maximum.
U00602	Image scanning section problem.
U00603	No document feed.
U00604	Document length exceeded the limit of the bitmap memory capacity.
U00610	Recording section cover is open.
U00611	Recording paper JAM
U00613	Image writing section problem
U00614	Nearly empty of recording paper
U00615	Empty of recording paper
U00620	Copier fixing unit problem
U00622	Copier drive motor problem
U00655	CTS was not activated after RTS due to a modem error.
U00656	Data was not transmitted after CTS was activated due to a modem error.
U00670	Power was cut off during communication.
U00677	There was no file to transmit in the memory transmission mode.
U00690	System error.

(2-3) U008XX error code table: Page transmission error

Error code	Description
U00800	A page transmission error occurred because of reception of a RTN or PIN signal.
U00810	A page transmission error reoccurred after retry of transmission in the ECM mode.

(2-4) U009XX error code table: Page reception error

Error code	Description
U00900	An RTN or PIN signal was transmitted because of a page reception error.
U00910	A page reception error remained after retry of transmission in the ECM mode.

(2-5) U010XX error code table: G3 transmission

Error code	Description
U01000	An FTT signal was received for a set number of times after TCF signal transmission at 2400 bps. Or, an RTN signal was received in response to a Q signal (excluding EOP) after transmission at 2400 bps.
U01001	Function of the unit differs from that indicated by a DIS signal.
U01010	No relevant signal was received after transmission of a DNL (MPS or EOM) signal, and the preset number of command retransfers was exceeded (between units of our make).
U01011	No relevant signal was received after transmission of a DCS, TCF signal, and the preset number of command retransfers was exceeded.
U01012	No relevant signal was received after transmission of an NSS1, NSS2 (TCF) signal, and the preset number of command retransfers was exceeded (between units of our make).
U01013	No relevant signal was received after transmission of an NSS3, TCF signal, and the preset number of command retransfers was exceeded (between units of our make).
U01014	No relevant signal was received after transmission of an MPS signal, and the preset number of command retransfers was exceeded.
U01015	No relevant signal was received after transmission of an EOM signal, and the preset number of command retransfers was exceeded.
U01016	An MCF signal was received but no DIS signal was received after transmission of an EOM signal, and T1 timeout was detected.
U01017	No relevant signal was received after transmission of an EOP signal, and the preset number of command retransfers was exceeded.
U01018	No relevant signal was received after transmission of a PRI-EOP signal, and the preset number of command retransfers was exceeded.
U01019	No relevant signal was received after transmission of a CNC signal, and the preset number of command retransfers was exceeded (between units of our make).
U01020	No relevant signal was received after transmission of a CTC signal, and the preset number of command retransfers was exceeded (ECM).
U01021	No relevant signal was received after transmission of an EOR.Q signal, and the preset number of command retransfers was exceeded (ECM).
U01022	No relevant signal was received after transmission of an RR signal, and the preset number of command retransfers was exceeded (ECM).
U01023	No relevant signal was received after transmission of a PSS.NULL signal, and the preset number of command retransfers was exceeded (ECM).
U01024	No relevant signal was received after transmission of a PSS.MPS signal, and the preset number of command retransfers was exceeded (ECM).
U01025	No relevant signal was received after transmission of a PPS.EOM signal, and the preset number of command retransfers was exceeded (ECM).
U01026	No relevant signal was received after transmission of a PPS.EOP signal, and the preset number of command retransfers was exceeded (ECM).
U01027	No relevant signal was received after transmission of a PPS.PRI-EOP signal, and the preset number of command retransfers was exceeded (ECM).
U01028	T5 time-out was detected during ECM transmission (ECM).

Error code	Description
U01040	A DCN or other inappropriate signal was received during standby for DIS signal reception.
U01041	A DCN signal was received after transmission of a DNL (MPS or EOM) signal (between units of our make).
U01042	A DCN signal was received after transmission of a DCS, TCF signal.
U01043	A DCN signal was received after transmission of an NSS1, NSS2 (TCF) signal (between units of our make).
U01044	A DCN signal was received after transmission of an NSS3, TCF signal (between units of our make).
U01045	A DCN or other inappropriate signal was received after transmission of an MPS signal.
U01046	A DCN or other inappropriate signal was received after transmission of an EOM signal.
U01047	A DCN or other inappropriate signal was received after transmission of an EOP signal.
U01048	A DCN signal was received after transmission of a PRI-EOP signal.
U01049	A DCN signal was received after transmission of a CNC signal (between units of our make).
U01050	A DCN signal was received after transmission of a CTC signal (ECM).
U01051	A DCN signal was received after transmission of an EOR.Q signal (ECM).
U01052	A DCN signal was received after transmission of an RR signal (ECM).
U01053	A DCN signal was received after transmission of a PPS.NULL signal (ECM).
U01054	A DCN signal was received after transmission of a PPS.MPS signal (ECM).
U01055	A DCN signal was received after transmission of a PPS.EOM signal (ECM).
U01056	A DCN signal was received after transmission of a PPS.EOP signal (ECM).
U01057	A DCN signal was received after transmission of a PPS.PRI-EOP signal (ECM).
U01070	Polarity reversal was detected during handshake.
U01071	Polarity reversal was detected during message transmission.
U01072	A break in loop current was detected during transmission.
U01073	During reverse polling in V.34 mode at the receiver unit, a CM signal was not detected when transmitting after reception.
U01080	A PIP signal was received after transmission of a PPS.NULL signal.
U01091	During transmission in V.34 mode, communication was interrupted because a PPR signal was received over 10 times even after reducing the communication speed to the minimum with the symbol speed maintained at the level of connection.
U01092	During transmission in V.34 mode, communication was interrupted because of an impossible combination of the symbol speed and communication speed.

(2-6) U011XX error code table: G3 reception

Error code	Description
U01100	Function of the unit differs from that indicated by a DCS signal.
U01101	Function of the unit (excl. communication mode select) differs from that indicated by an NSS signal.
U01102	A DTC (NSC) signal was received when no transmission data was in the unit.
U01110	No response after transmission of a DIS signal.
U01111	No response after transmission of a DTC (NSC) signal.
U01112	No training reception after reception of a DCS or NSS signal.
U01113	No response after transmission of an FTT signal.
U01114	No message reception after transmission of a CFR signal.
U01115	No message reception after transmission of an MCF signal.
U01116	No message reception after transmission of a PPR signal.
U01117	No message reception after transmission of a CTR signal.
U01118	No message reception after transmission of an ERR signal.
U01119	No further signals were received after reception of a message.
U01120	No response after transmission of an MCF signal.
U01121	No response after transmission of an RTP signal.
U01122	No response after transmission of an RTN signal.
U01123	No response after transmission of a PIP signal.
U01124	No response after transmission of a PIN signal.
U01125	No response after transmission of a CNS signal (between units of our make).
U01126	No response after transmission of a PPR signal (ECM).
U01127	No response after transmission of an ERR signal (ECM).
U01128	No response after transmission of an RNR signal (ECM).
U01129	No response after transmission of an SPA signal (short protocol).
U01140	A DCN signal was received after transmission of a DIS signal.
U01141	A DCN signal was received after transmission of a DTC signal.
U01142	A DCN signal was received after transmission of a DCS or NSS signal.
U01143	A DCN signal was received after transmission of an FTT signal.
U01144	A DCN signal was received after transmission of a CFR signal.
U01145	A DCN signal was received after reception of a message.
U01146	A DCN signal was received after transmission of an MCF signal (interoffice communication after reception of an MPS, EOM signal or confidential interoffice communication).
U01147	A DCN signal was received after transmission of an RTP signal.
U01148	A DCN signal was received after transmission of an RTN signal.
U01149	A DCN signal was received after transmission of a PIP signal.
U01150	A DCN signal was received after transmission of a PIN signal.
U01151	A DCN signal was received after transmission of a PPR signal (ECM).

Error code	Description
U01152	A DCN signal was received after transmission of a CTR signal (ECM).
U01153	A DCN signal was received after transmission of an ERR signal (ECM).
U01154	A DCN signal was received after transmission of an RNR signal (ECM).
U01155	A DCN signal was received after transmission of an SPA signal (short protocol).
U01160	During message reception, transmission time exceeded the maximum transmission time per line.
U01161	Number of error lines exceeded limits during message reception.
U01162	A break in loop current was detected during message reception.
U01163	Polarity reversal was detected during message reception.
U01164	One page length exceeded the specified length during message reception.
U01170	A decoding error occurred during MMR message reception.
U01172	During reverse polling in V.34 mode at the transmitting unit, a JM signal was not detected after transmission of a CM signal when receiving after transmission.
U01191	Communication was interrupted because an error occurred during an image data reception sequence in the V.34 mode.
U01199	A DIS signal with different FIF was received after transmission of a DIS signal.

(2-7) U017XX error code table: V.34 transmission

Error code	Description
U01700	A communication error occurred in phase 2 (line probing).
U01720	A communication error occurred in phase 4 (modem parameter exchange).
U01721	Operation was interrupted due to the absence of a common communication speed between units.

U01700: A communication error that occurs at the transmitting unit in the period after transmission of INFO0 before entering phase 3 (primary channel equivalent device training). For example, INFO0/A/Abar (B/Bbar, for polling transmission)/INFOh was not detected.

U01720: A communication error that occurs at the transmitting unit in the period after initiating the control channel before entering the T.30 process. For example, PPh/ALT/MPh/E was not detected.

U01721: In the absence of a common communication speed between units (including when an impossible combination of communication speed and symbol speed occurs) after MPh exchange; 1) a DCN signal was received from the destination unit, and the line was cut; or 2) a DIS (NSF, CSI) signal was received from the destination unit and, in response to the signal, the unit transmitted a DCN signal, and the line was cut.

(2-8) U018XX error code table: V.34 reception

Error code	Description
U01800	A communication error occurred in phase 2 (line probing).
U01810	A communication error occurred in phase 3 (primary channel equivalent device training).
U01820	A communication error occurred in phase 4 (modem parameter exchange).
U01821	Operation was interrupted due to the absence of a common communication speed between units.

U01800: A communication error that occurs at the receiver unit in the period after transmission of INFO0 before entering phase 3 (primary channel equivalent device training). For example, INFO0/B/Bbar (A/Abar, for polling reception)/probing tone was not detected.

U01810: A communication error that occurs at the receiver unit in phase 3 (primary channel equivalent device training).

For example, S/Sbar/PP/TRN was not detected.

U01820: A communication error that occurs at the receiver unit in the period after initiating the control channel before entering the T.30 process. For example, PPh/ALT/MPh/E was not detected.

U01821: In the absence of a common communication speed between units (including when an impossible combination of communication speed and symbol speed occurs) after MPh exchange, a DCN signal was transmitted to the destination unit and the line was cut.

(2-9) U023XX error code table: Relay command abnormal reception

Error code	Description
U02303	Timeout was detected before a correct DNL signal was received.
U02304	A signal other than MPS or EOM signal was received after a DNL signal was received.

(2-10) U044XX error code table: Encrypted transmission

Error code	Description
U04400	Encrypted transmission was interrupted because encryption keys did not agree.
U04401	Calling failed during encrypted transmission because the encryption key was not registered.

This page is intentionally left blank.

1-5-1 Precautions for assembly and disassembly

(1) Precautions

Before starting disassembly, press the Power key on the operation panel to off. Make sure that the Power lamp is off before turning off the power switch. Unplug the power cable from the wall outlet.

When the fax kit is installed, be sure to disconnect the modular code before starting disassembly.

When handling PWBs (printed wiring boards), do not touch parts with bare hands.

The PWBs are susceptible to static charge.

Do not touch any PWB containing ICs with bare hands or any object prone to static charge.

When removing the hook of the connector, be sure to release the hook.

Take care not to get the cables caught.

To reassemble the parts, use the original screws. If the types and the sizes of screws are not known, refer to the PARTS LIST.

(2) Drum unit

Note the following when handling or storing the drum unit.

When removing the drum unit, never expose the drum surface to strong direct light.

Do not leave it for a long time even if it is weak light such as fluorescent lamps.

Keep the drum unit at an ambient temperature between -20°C/-4°F and 40°C/104°F and at a relative humidity not higher than 85% RH. Avoid abrupt changes in temperature and humidity.

Avoid exposure to any substance which is harmful to or may affect the quality of the drum unit.

Do not touch the drum surface with any object. Should it be touched by hands or stained with oil, clean it.

(3) Toner

Store the toner container in a cool, dark place.

Avoid direct light and high humidity.

(4) How to tell a genuine Kyocera toner container

As a means of brand protection, the Kyocera toner container utilizes an optical security technology to enable visual validation. A validation viewer is required to accomplish this.

Hold the validation viewer over the left side part of the brand protection seal on the toner container. Through each window of the validation viewer, the left side part of the seal should be seen as follows:

A black-colored band when seen through the left side window (●)

A shiny or gold-colored band when seen through the right side window (☀)

The above will reveal that the toner container is a genuine Kyocera branded toner container, otherwise, it is a counterfeit.

Figure 1-5-1

The brand protection seal has an incision as shown below to prohibit reuse.

Figure 1-5-2

1-5-2 Outer covers

(1) Detaching and refitting the left cover and right cover

Procedure

1. Remove the screw.
2. Unhook four hooks and then remove the rear upper cover.

Figure 1-5-3

3. Remove the cassette (See page 1-5-6).
4. Open the front cover.
5. Unhook the hook and then remove the controller box cover.

Figure 1-5-4

6. Unhook seven hooks and then remove the right cover.

Figure 1-5-5

7. Unhook six hooks and then remove the left cover.

Figure 1-5-6

1-5-3 Paper feed section

(1) Detaching and refitting the paper feed assembly (paper feed roller and pickup roller)

Procedure

1. Remove the cassette.

Figure 1-5-7

2. Slide the feed shaft.
3. While pressing the lever and then remove the paper feed roller assembly.

Figure 1-5-8

4. Check or replace the paper feed roller assembly and refit all the removed parts.

When refitting the paper feed roller assembly, be sure to align the paper feed roller pivot with the slotted hole on the feed shaft.

Figure 1-5-9

(2) Detaching and refitting the retard roller assembly

Procedure

1. Remove the cassette (See page 1-5-6).
2. Push the bottom plate down until it locks.
3. Unhook two hooks and then remove the retard guide.

Figure 1-5-10

4. Remove the retard roller assembly.

Figure 1-5-11

5. Check or replace the retard roller assembly and refit all the removed parts.

Caution: Before refitting the retard roller assembly, firmly install the spring onto the projection of the retard roller assembly.

Figure 1-5-12

(3) Detaching and refitting the MP paper feed roller

Procedure

1. Open the front cover.
2. Pull the MP feed holder (lever) down. :1
3. Slide the MP feed holder. :2
4. Remove the MP paper feed roller. :3

Figure 1-5-13

5. Check or replace the MP paper feed roller and refit all the removed parts.

When refitting the MP paper feed roller, be sure to align the paper feed roller pivot with the slotted hole on the MPF feed shaft.

When refitting the MP paper feed roller, be sure to align the MPF feed shaft pivot with the slotted hole on the MP paper feed roller.

Figure 1-5-14

(4) Note on removing and Installing the upper registration roller and lower registration roller

When reinstalling the upper registration roller or lower registration roller, be sure to use a new registration L spring and registration R spring. Otherwise, paper feeding may be deteriorated due to the spring hooks possibly being distorted during the spring is unhooked.

Figure 1-5-15

1-5-4 Optical section

(1) Detaching and refitting the DP

Procedure

1. Pull the DP out.

Figure 1-5-16

(2) Detaching and refitting the scanner unit

Procedure

1. Remove the DP (See page 1-5-13).
2. Remove the left cover and right cover (See page 1-5-3).
3. Remove the FFC and connector from the control PWB.
4. Remove three connectors from the scanner PWB.

Figure 1-5-17

5. Release three clamps and then remove the wires.

Figure 1-5-18

6. Remove two screws.

Figure 1-5-19

7. Unhook four hooks and then remove the scanner unit.

Figure 1-5-20

(3) Detaching and refitting the laser scanner unit (LSU)

Procedure

1. Remove the scanner unit (See page 1-5-14).
2. Remove the screw and then remove the grounding terminal.
3. Remove three connectors from the control PWB.

Figure 1-5-21

4. Remove the wires from three clamps.
5. Remove the connector from the power source PWB.

Figure 1-5-22

6. Unhook four hooks and then remove the frame left duct.
7. Remove the wires from the clamp.

Figure 1-5-23

8. Release the hook and then remove the top cover rack-L from the top cover.

Figure 1-5-24

9. Remove four screws from the top cover.

Figure 1-5-25

- Unhook two hooks and then remove the top cover.

Figure 1-5-26

- Release the clamp and then pull out the wires.
- Remove four screws and then remove the laser scanner unit (LSU).
- Check or replace the laser scanner unit (LSU) and refit all the removed parts.

Figure 1-5-27

(4) Replacing the image scanner unit (ISU)

Procedure

Removing the image scanner unit (ISU)

1. Remove the DP (See page 1-5-13).
2. Unhook two hooks by using a flat screwdriver from the pits.
3. Remove the connector and then remove the operation panel.

Figure 1-5-28

4. Remove two screws.
5. Unhook three hooks and then remove the ISU upper frame.

Figure 1-5-29

6. Move the image scanner unit (ISU) in the middle of the ISU shaft.
7. Detach the ISU shaft from the holder by lifting it.
8. Pull the ISU shaft out from the ISU.

Figure 1-5-30

9. Remove the ISU belt from the tension pulley and ISU gear 63/32.
10. Remove the ISU belt from the hooks of the ISU.

Figure 1-5-31

11. Remove the FFC center stopper.

Figure 1-5-32

- 12. Remove the FFC from the FFC tape D.
- 13. Remove the ferrite core from the pit.
- 14. Remove the FFC from the FFC tape A.

Figure 1-5-33

15. Fold the end of the FFC and then pull the FFC out from the ISU lower frame.
16. Remove the FFC tape D and A from the ISU lower frame.
17. Clean the adhesive residue of the FFC tape D and A.

Figure 1-5-34

18. Remove the ferrite core from the FFC.

Figure 1-5-35

Installing the image scanner unit (ISU)

1. Peel off the protective seal on one side from the FFC tape D.
2. Stick the FFC tape D on the ISU lower frame, aligned with the marking of the frame.
(Sticking standards: See right figure)
3. Peel off the protective seal on the other side of the FFC tape A.
4. Stick the FFC tape A on the ISU lower frame.
(At the right for how to correctly stick the tape in position, see the figure.)

**Figure 1-5-36**

5. Fix the ferrite core onto the FFC.

**Figure 1-5-37**

6. Peel off the protective seal from the FFC tape D.
7. Align the line marking on the FFC with the rib on the ISU lower frame, then fix the FFC to the FFC tape D.
8. Install the ferrite core in the pit.
9. Peel off the released paper from the FFC tape A.
10. Stick the FFC on the FFC tape A.

Figure 1-5-38

11. Thread an end of the FFC through the ISU lower frame.
12. Refer to the step 11 to 1 and refit all the removed parts.

NOTE:

When the replacing the image scanner unit (ISU), perform following maintenance modes.

1. U425 Setting the target (see page 1-3-22)
2. U411 Adjusting the scanner automatically (see page 1-3-19)

Figure 1-5-39

1-5-5 Developer section

(1) Detaching and refitting the developer unit

Procedure

1. Open the front cover.
2. Remove the developer unit.
3. Check or replace the developer unit and refit all the removed parts.

NOTE:

When the periodic maintenance (replacing the maintenance kit, see page 2-4-4), perform following maintenance modes.

1. U251 Clearing the maintenance count (see page 1-3-15)

Figure 1-5-40

1-5-6 Drum section

(1) Detaching and refitting the drum unit

Procedure

1. Remove the developer unit (See page 1-5-27).
2. Remove the drum unit.
3. Check or replace the drum unit and refit all the removed parts.

NOTE:

When the periodic maintenance (replacing the maintenance kit, see page 2-4-4), perform following maintenance modes.

1. U251 Clearing the maintenance count (see page 1-3-15)

Figure 1-5-41

(2) Detaching and refitting the main charger unit

Procedure

1. Remove the developer unit (See page 1-5-27).
2. Remove the drum unit (See page 1-5-28).
3. Remove the tape.
4. While pushing on the main plate 1, slide the main charger unit 2.

Figure 1-5-42

5. Remove the main charger unit by lifting it.
6. Check or replace the main charger unit and refit all the removed parts.

Figure 1-5-43

1-5-7 Transfer/separation section

(1) Detaching and refitting the transfer roller

Procedure

1. Remove the developer unit (See page 1-5-27).
2. Remove the drum unit (See page 1-5-28).
3. Slide the paper chute guide and unhook the hooks.
4. Remove the paper chute guide.

Figure 1-5-44

5. Remove the transfer roller's shaft from the both transfer bushes.
6. Remove the gear Z16 from the transfer roller.

Figure 1-5-45

7. Check or replace the transfer roller and refit all the removed parts.

Caution: When refitting the transfer roller, be careful about following point. Push the release lever to raise the lever end, then insert the front of gear Z16 under the release lever end.

Figure 1-5-46

1-5-8 Fuser section

(1) Detaching and refitting the fuser unit

Procedure

1. Remove the left cover and right cover
(See page 1-5-3).
2. Remove the wires from three clamps.
3. Remove the connector from the power source PWB.

Figure 1-5-47

4. Unhook four hooks and then remove the frame left duct.
5. Remove the wires from the clamp.

Figure 1-5-48

6. Remove the connector from the power source PWB.

Figure 1-5-49

7. Remove the connector from the control PWB.

Figure 1-5-50

8. Remove the rear cover.

Figure 1-5-51

9. Remove two screws and then remove the fuser unit.

Figure 1-5-52

10. Check or replace the fuser unit and refit all the removed parts.

Caution: When reinstalling the fuser unit, tighten up a screw while pressing the fuser unit in order of 1 to 2.

Figure 1-5-53

(2) Switching the fuser pressure

The fuser pressure may be decreased to suppress the print quality problems such as paper creases and curls.

It must be cautioned that decreasing the fuser pressure could cause loose toner fusing.

Procedure

1. Remove the cassette (See page 1-5-6).
2. Open the duplex cover.
3. Slide the fuser lever R and L.
 Normal: Flush with the front of the machine.
 Fuser pressure decreased: Flush with the rear of the machine.

Figure 1-5-37

1-5-9 PWBs

(1) Detaching and refitting the control PWB

Procedure

1. Remove the FAX control PWB.
(See page 1-5-48)
2. Remove the right cover.
(See page 1-5-3)
3. Remove the five connectors from the scanner PWB.
4. Remove twenty connectors and two FFCs from the control PWB.
5. Remove the wires from the clamp.

Figure 1-5-55

- Remove five screws and the grounding terminal and then remove the control box.

Figure 1-5-56

- Remove seven screws and the grounding terminal and then remove the control PWB.

Figure 1-5-57

8. Check or replace the control PWB and refit all the removed parts.

To replace the control PWB, remove the EEPROM (U17) from the old control PWB and mount it to the new control PWB.

Figure 1-5-58

(2) Detaching and refitting the power source PWB

Procedure

1. Remove the left cover (See page 1-5-3).
2. Remove the wires from three clamps.
3. Remove five connectors from the power source PWB.

Figure 1-5-59

4. Unhook four hooks and then remove the frame left duct.
5. Remove the wire from the clamp.

Figure 1-5-60

- Remove the screw and then detach the inlet mount.

Figure 1-5-61

- Remove five screws.
- Remove two connectors and then remove the power source PWB assembly.

Figure 1-5-62

9. Remove four screws and then remove the power source PWB from the power source PWB plate.
10. Check or replace the power source PWB and refit all the removed parts.

Caution: The power source PWB sheet must be installed in the specified position.

Figure 1-5-63

(3) Detaching and refitting the high voltage PWB

Procedure

1. Remove the developer unit (See page 1-5-27).
2. Remove the drum unit (See page 1-5-28).
3. Remove the cassette (See page 1-5-6).
4. Remove the left cover and right cover (See page 1-5-3).
5. Remove the power source PWB (See page 1-5-40).
6. Turn the machine with the front side up.
7. Remove the stopper.
8. Remove the DU holder.

Figure 1-5-64

9. Pull the DU bush out.
10. Remove the DU cover assembly.

Figure 1-5-65

11. Remove four screws.
12. Unhook three hooks and then remove the lower base cover.

Figure 1-5-66

- 13. Remove the spring.
- 14. Remove the cassette pin.

Figure 1-5-67

- 15. Remove two connectors and then remove the high voltage PWB.
- 16. Remove the cassette pin holder from the high voltage PWB.

Figure 1-5-68

17. Check or replace the high voltage PWB and refit all the removed parts.

When refitting the high voltage PWB, be careful about following points.

- Position the ground plate so that it is atop the high voltage PWB.
- Each interface is firmly in contact with each spring.
- The bias contact pin must be installed in the specified position.
- The cassette pin must be inserted in the cassette pin holder.

Figure 1-5-69

(4) Detaching and refitting the scanner PWB

Procedure

1. Remove the right cover (See page 1-5-3).
2. Remove six connectors and the FFC from the scanner PWB.

Figure 1-5-70

3. Remove four screws and then remove the scanner PWB.
4. Check or replace the scanner PWB and refit all the removed parts.

NOTE:

When replacing the scanner PWB, perform the following maintenance modes.

1. U425 Setting the target (see page 1-3-22)
2. U411 Adjusting the scanner automatically (see page 1-3-19)

Figure 1-5-71

(5) Detaching and refitting the FAX control PWB

Procedure

1. Open the rear cover.
2. Unhook the hook and then remove the controller box cover.

Figure 1-5-72

3. Remove two screws and then remove the FAX control PWB.
4. Check or replace the FAX control PWB and refit all the removed parts.

Figure 1-5-73

1-5-10 Others

(1) Detaching and refitting the main motor

Procedure

1. Remove the right cover (See page 1-5-3).
2. Remove the connector.
3. Remove the M3 screw and two M4 screws.
4. Remove the main motor.
5. Check or replace the main motor and refit all the removed parts.

Figure 1-5-74

(2) Direction of installing the left cooling fan motor, right cooling fan motor

When detaching or refitting a fan motor, be careful of the airflow direction (intake or exhaust).

Figure 1-5-75

1-5-11 Document processor

(1) Detaching and refitting the DP rear cover and DP front cover

Procedure

1. Open the DP top cover.
2. Remove two screws.
3. Unhook the hook and then remove the DP rear cover.

Figure 1-5-76

4. Unhook two hooks and then remove the DP front cover.

Figure 1-5-77

(2) Detaching and refitting the DP drive PWB

Follow the procedure below to check or replace the DP drive PWB.

Procedure

1. Remove the DP rear cover.
(See page 1-5-51).
2. Remove eight connectors from the DP drive PWB.
3. Remove the screw and then remove the DP drive PWB.
4. Check or replace the DP drive PWB.
Refit all the removed parts.

Figure 1-5-78

(3) Detaching and refitting the feed pulley and forwarding pulley

Follow the procedure below to clean or replace the feed pulley or forwarding pulley.

Procedure

1. Remove the DP rear cover and DP front cover (See page P.1-5-51).
2. Remove the stopper.
3. Remove the bush.

Figure 1-5-79

4. Remove the stopper A and then remove the DP paper feed clutch.
5. Remove the stopper B and then remove the PF collar, spring, spring collar S, pin and bush from the PF shaft.

Figure 1-5-80

- Remove the forwarding pulley assembly.

Figure 1-5-81

Detaching the feed pulley

- Remove the stopper A.
- Remove the feed pulley assembly from the LF holder.
- Remove the stopper B.
- Remove the PF collar, spring, spring collar S and pin from the PF shaft.
- Remove the feed pulley, one-way clutch, PF pulley gear and pin from the PF shaft.

Figure 1-5-82

Detaching the forwarding pulley

12. Remove the PF stopper from the LF holder.
 13. Remove the stopper.
 14. Pull out the LF shaft and then remove the LF gear 18, forwarding feed joint gear and forwarding pulley.
 15. Clean or replace the feed pulley and forwarding pulley.
- Refit all the removed parts.

**Figure 1-5-83**

(4) Detaching and refitting the separation pad assembly

Follow the procedure below to clean or replace the separation pad assembly.

Procedure

1. Remove the forwarding pulley assembly (See page P.1-5-53).
 2. Remove the separation pad assembly.
 3. Clean or replace the separation pad assembly.
- Refit all the removed parts.

Figure 1-5-84

1-6-1 Upgrading the firmware

Follow the procedure below to upgrade the firmware of control PWB (main controller and engine) and scanner PWB.

Preparation

Extract the file that has the download firmware and put them in the USB Memory.

Procedure

1. Turn ON the power switch and confirm if the screen shows "Ready to print" then, turn OFF the power switch.
2. Insert USB memory that has the firmware in the USB memory slot.
3. Turn ON the power switch.
4. About 40 seconds later, "FW-Update" will be displayed and blinking the memory LED (this shows to start the download).
5. Display the software that now upgrading (5 minutes).

"FW- Update [CTRL]"

"[ENGN]"

"[SCAN]"

6. Display the completion of the upgrade (Memory LED is ON condition).
7. Cut the power supply by pulling out the power cable and remove the USB memory.

* : After the print engine farm is downloaded, it is not possible to turn it off with the power switch.

Figure 1-6-1

Check the result of the version up

1. Output the service status by the U000 and confirm the firmware version.

1-6-2 Remarks on control PWB replacement

When replacing the control PWB, remove the EEPROM (U17) from the control PWB that has been removed and then reattach it to the new control PWB.

Figure 1-6-2

Detaching of EEPROM

1. The flat screwdriver is inserted between EEPROM and socket.
2. Detach it little by little right and left and alternately while noting the transformation and the damage of the pin.

Figure 1-6-3

2-1-1 Paper feed/conveying section

Paper feed/conveying section consists of the paper feed unit that feeds paper from the cassette and the MP tray paper feed unit that feeds paper from the MP tray, and the paper conveying section that conveys the fed paper to the transfer/separation section.

(1) Cassette paper feed section

Figure 2-1-1 Cassette paper feed section

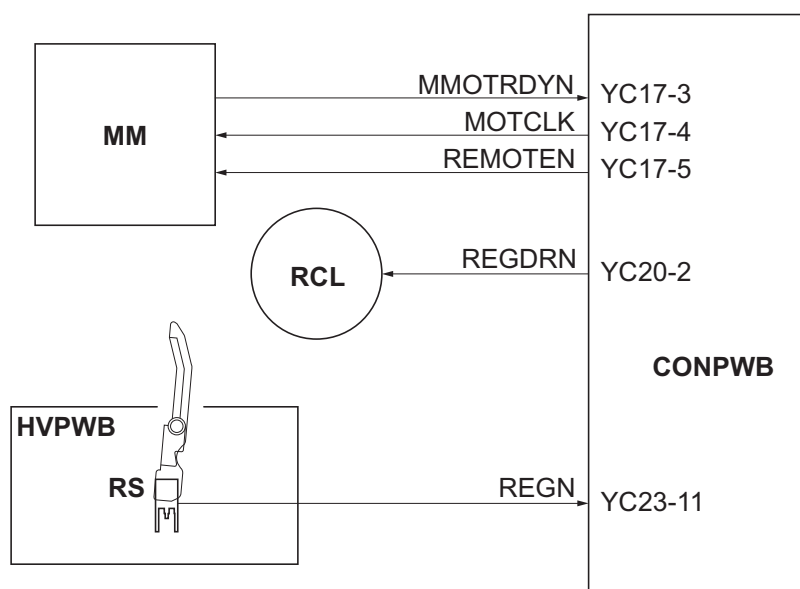

Figure 2-1-6 Paper conveying section block diagram

2-1-2 Drum section

(1) Drum section

The durable layer of organic photoconductor (OPC) is coated over the aluminum cylinder base. The OPC tend to reduce its own electrical conductance when exposed to light. After a cyclic process of charging, exposure, and development, the electrostatic image is constituted over the OPC layer.

Since the OPC is materialized by resin, it is susceptible to damage caused by sharp edges such as a screw-driver, etc., resulting in a print quality problem. Also, finger prints can cause deterioration of the OPC layer, therefore, the drum (in the drum unit) must be handled with care. Substances like water, alcohol, organic solvent, etc., should be strictly avoided.

As with all other OPC drums, the exposure to a strong light source for a prolonged period can cause a print quality problem. The limit is approximately 500 lux for less than five minutes. If the drum (drum unit) remains removed from the machine, it should be stored in a cool, dark place.

Figure 2-1-7 Drum unit

1. Drum
2. Drum shaft
3. Drum cover A
4. Drum cover B

(2) Main charger unit

As the drum rotates in a "clean (neutral)" state, its photoconductive layer is given a uniform, positive (+) corona charge dispersed by the main charger wire. Due to high-voltage scorotron charging, the charging wire can get contaminated by oxidization after a long run. Therefore, the charger wire must be cleaned at a specific interval. Cleaning the charging wire prevents print quality problems such as black streaks.

Figure 2-1-8 Main charger unit

1. Main charger shield
2. Main charger wire
3. Main charger grid
4. Main charger wire cleaner

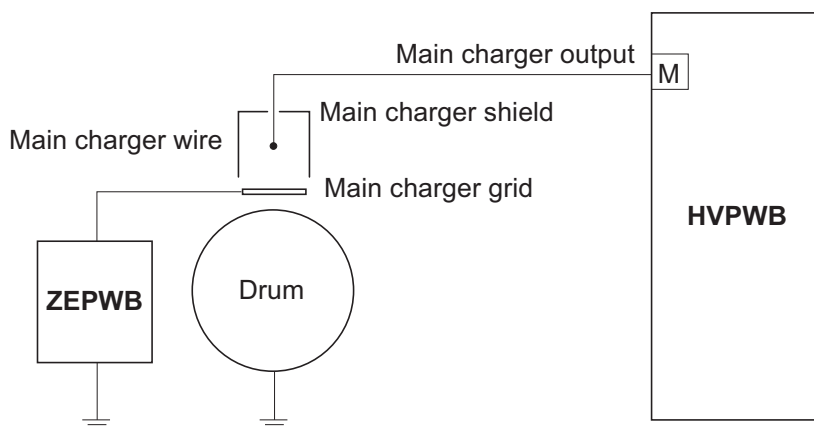

Figure 2-1-9 Drum unit and main charger unit block diagram

2-1-3 Optical section

(1) Scanner unit

Figure 2-1-10 Scanner unit

- | | |
|-------------------------|------------------------------|
| 1. ISU top frame | 6. ISU belt |
| 2. ISU bottom frame | 7. ISU shaft |
| 3. Contact glass | 8. ISU gear 63/32 |
| 4. DP contact glass | 9. ISU motor |
| 5. Size indicator plate | 10. Image scanner unit (ISU) |

(2) Image scanner unit (ISU)

The original image is illuminated by the LED and scanned by the CCD image sensor in the CCD PWB (CCD-PWB) via the four mirrors and ISU lens, the reflected light being converted to an electrical signal.

If a document processor (DP) is used, the image scanner unit stops at the position of the DP contact glass and scans sequentially one row of the image on the original in synchronization with the moving timing of the original in the sub scan direction by driving the DP.

Figure 2-1-11 Image scanner unit (ISU)

(3) Laser scanner unit

The charged surface of the drum is then scanned by the laser beam from the laser scanner unit. The laser beam (780 nm wavelength) beam is dispersed as the polygon motor revolves to reflect the laser beam over the drum. Various lenses and mirror are housed in the laser scanner unit, adjust the diameter of the laser beam, and focalize it at the drum surface.

2-1-4 Developing section

The latent image constituted on the drum is developed into a visible image. The developing roller contains a 3-pole (S-NS) magnet roller and an aluminum cylinder rotating around the magnet roller. Toner attracts to the magnet sleeve since it is powdery ink made of black resin bound to iron particles. Developing blade, magnetized by magnet, is positioned approximately 0.3 mm above the magnet sleeve to constitute a smooth layer of toner in accordance with the magnet sleeve revolution.

The developing roller is applied with the AC-weighted, positive DC power source. Toner on the magnet sleeve is given a positive charge. The positively charged toner is then attracted to the areas of the drum which was exposed to the laser light. (The gap between the drum and the magnet sleeve is approximately 0.32 mm.) The non-exposed areas of the drum repel the positively charged toner as these areas maintain the positive charge.

The developing roller is also AC-biased to ensure contrast in yielding by compensating the toner's attraction and repelling action during development.

Figure 2-1-16 Developing section block diagram

2-1-5 Transfer/separation section

The transfer/separation section consists of the transfer roller, discharge electrode and paper chute guide. A high voltage generated by the high voltage PWB is applied to the transfer roller for transfer charging. Paper after transfer is separated from the drum.

Figure 2-1-17 Transfer/separation section

1. Transfer roller
2. Transfer bushes
3. Discharge electrode
4. DC brush holder
5. Paper chute guide

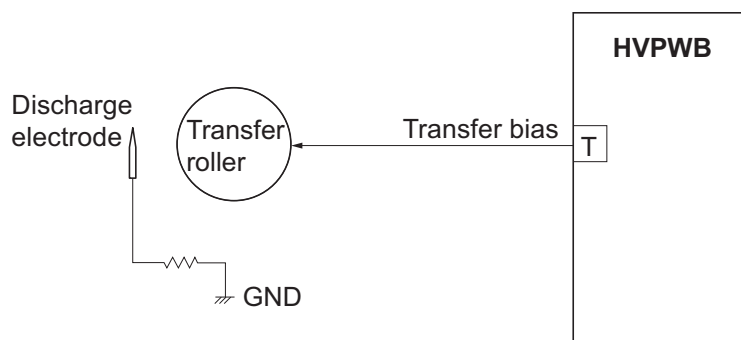

Figure 2-1-18 Transfer/separation section block diagram

2-1-6 Cleaning section

After the transferring process, the drum needs to be physically cleaned of toner which is residual after the development process. The cleaning blade is constantly pressed against the drum and scrapes the residual toner off to the sweep roller.

The waste toner is collected at the output end of the sweep roller and sent back to the toner container, into the waste toner reservoir.

After the drum is physically cleaned, it then must be cleaned to the electrically neutral state. This is necessary to erase any residual positive charge, ready to accept the uniform charge for the next print process. The residual charge is canceled by exposing the drum to the light emitted from the cleaning lamp (PWB). This lowers the electrical conductivity of the drum surface making the residual charge on the drum surface escape to the ground.

Figure 2-1-19 Cleaning section

1. Cleaning lamp (PWB)
2. Sweep roller
3. Cleaning blade

Figure 2-1-20 Cleaning section block diagram

2-1-7 Fuser section

The toner on the paper is molten and pressed into the paper as it passes between the heat roller and the press roller in the fuser unit. The heat roller has a heater inside which continuously turns on and off by the fuser thermistor to maintain the constant temperature onto the heat roller surface. The heat roller is resin coated by fluorin to prevent toner from accumulating on the roller after a long run. Care must be taken while handling the heat roller not to scratch the roller surface as doing so may result in print problems. Fuser temperature is optimized to the paper type. The heat roller has four separators (claws) which are continuously in contact with its surface. These separators (claws) prevent the paper on which toner has been fused from being wound around the heat roller causing paper jam. The press roller is made of the heat-resistant silicon rubber. This roller is used to strongly press the paper towards the heat roller by means of press springs. The temperature of the heat roller is constantly monitored by the control PWB using the fuser thermistor. Should the temperature of the heat roller exceed the predetermined value, the fuser thermal cutout is activated to effectively disconnect the heater from power.

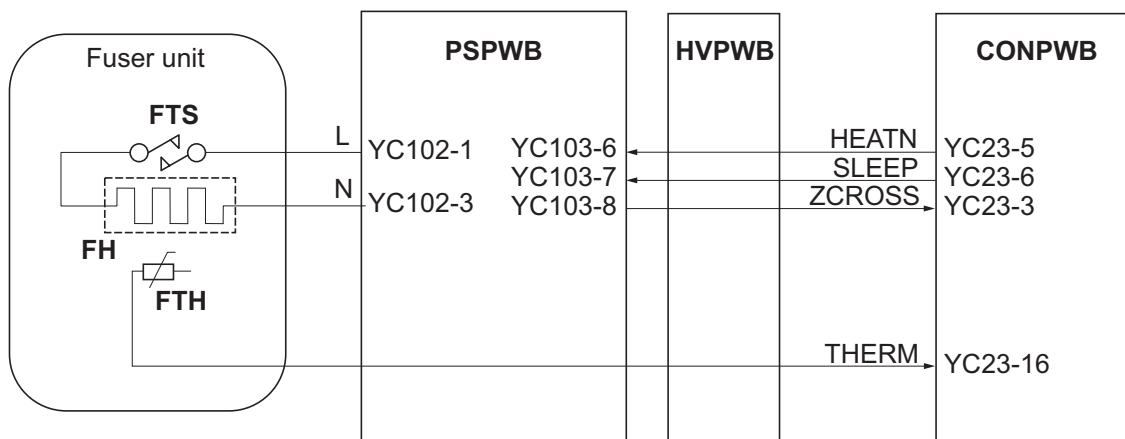

Figure 2-1-22 Fuser unit block diagram

2-1-8 Paper exit section

The paper exit section transports the paper which passed the fuser unit towards the top tray. The paper which passed through the fuser unit turns on the actuator (exit sensor) in the fuser unit, and is led by the guide comprised of the rear cover, frame and the FD cover guide, finally reaching the upper FD roller. The paper is delivered to the top tray by the rotation of the upper FD roller.

2-2-1 Electrical parts layout

(1) PWBs

Figure 2-2-1 PWBs

- | | |
|--------------------------------------|--|
| 1. Control PWB (CONPWB)..... | Main controller: Controls the software such as the print data processing and provides the interface with computers.
Engine: Controls machine hardware such as high voltage/bias output control, paper conveying system control, and fuser temperature control, etc. |
| 2. Power source PWB (PSPWB) | After full-wave rectification of AC power source input, switching for converting to 24 V DC for output. Controls the Fuser heater. |
| 3. High voltage PWB (HVPWB) | Generates main charging, developing bias and transfer bias. |
| 4. Operation panel PWB (OPPWB) | Consists the LCD, LED indicators and key switches. |
| 5. APC PWB (APCPWB) | Generates and controls the laser beam. |
| 6. PD PWB (PDPWB) | Controls horizontal synchronizing timing of laser beam. |
| 7. Zener PWB (ZEPWB) | Adjusts the drum surface potential. |
| 8. Scanner PWB (SCPWB)..... | Controls the scanner section. |
| 9. CCD PWB (CCDPWB)..... | Reads the image of originals. |
| 10. LED drive PWB (LEDDRPWB) | Controls the exposure lamp. |
| 11. FAX control PWB (FCPWB)..... | Modulates, demodulates, compresses, decompresses and smoothes out image data, and converts resolution of image data. |
| 12. LED PWB (LEDPWB) | Exposes originals. |
| 13. RFID PWB (RFPWB)..... | Reads the container information. |

(2) Switches and sensors**Figure 2-2-2 Switches and sensors**

- | | |
|-------------------------------------|---|
| 1. Power switch (MSW)..... | Switches of main body operation. |
| 2. Interlock switch (ILSW) | Shuts off 24 V DC power line when the front cover is opened. |
| 3. Cassette switch (COCSW)..... | Detects open/close cassette. |
| 4. Registration sensor (RS)..... | Detects the timing of primary paper feed. |
| 5. Paper sensor (PS) | Detects the presence of paper in the cassette. |
| 6. MP paper sensor (MPPS) | Detects the presence of paper on the MP tray. |
| 7. Exit sensor (ES) | Detects paper jam in the fuser or duplex conveying section. |
| 8. Home position sensor (HPS) | Detects the ISU in the home position. |
| 9. Toner sensor (TS) | Detects the quantity of toner in a toner container. |
| 10. Waste toner sensor (WTS)..... | Detects when the waste toner reservoir (Drum unit) is full. |
| 11. Fuser thermistor (FTH) | Measures the heat roller temperature. |
| 12. Fuser thermostat (FTS)..... | Shuts off the power source to the Fuser heater when the heat roller reaches extremely high temperature. |

(3) Other electrical components**Figure 2-2-3 Other electrical components**

- | | |
|--|---|
| 1. Main motor (MM)..... | Drives the paper feed/conveying section and fuser unit. |
| 2. Polygon motor (PM)..... | Drives the polygon mirror. |
| 3. ISU motor (ISUM)..... | Drives the ISU. |
| 4. Right cooling fan motor (RFM)..... | Cools the interior of machine. |
| 5. Left cooling fan motor (LFM)..... | Cools the interior of machine. |
| 6. Registration clutch (RCL)..... | Controls the secondary paper feed. |
| 7. Paper feed clutch (PFCL)..... | Controls the paper cassette paper feed. |
| 8. Developing clutch (DEVCL)..... | Controls the toner feed. |
| 9. Duplex solenoid (DUCL)..... | Controls the paper conveying at the duplex conveying section. |
| 10. MP paper feed solenoid (MPPFSOL) ... | Controls the MPF bottom plate of the MP tray. |
| 11. Fuser heater (FH)..... | Heats the heat roller. |
| 12. Cleaning lamp (CL)..... | Eliminates the residual electrostatic charge on the drum. |
| 13. Speaker (SP)..... | Outputs buzzer, monitoring and speaker sounds. |

(4) Document processor

Figure 2-2-4 Document processor

- 1. DP drive PWB (DPDPWB)..... Consists the solenoids and clutch driver circuit and wiring relay circuit.
- 2. DP original sensor (DPOS) Detects the presence of an original.
- 3. DP timing sensor (DPTS)..... Detects the original scanning timing.
- 4. DP open/close sensor (DPOCS)..... Detects the opening/closing of the DP.
- 5. DP paper feed motor (DPPFM)..... Drives the original feed section.
- 6. DP paper feed clutch (DPPFCL)..... Controls the drive of the forwarding pulley and feed pulley.
- 7. DP switchback solenoid (DPSBSOL).... Operates the switchback guide.
- 8. DP pressure solenoid (DPPRSOL) Operates the switchback pulley.

Maintenance part name		Part No.	Alternative part No.
Name used in service manual	Name used in parts list		
Maintenance kit (For 30ppm, 100,000page)	MK-1130/MAINTENANCE KIT (OPTION) DK-150 DV-132(U)	1702MJ0NL0	072MJ0NL
	MK-1132/MAINTENANCE KIT (OPTION) DK-150 DV-130(E)	1702MJ0KL0	072MJ0KL
	MK-1134/MAINTENANCE KIT (OPTION) DK-150 DV-134(AO)	1702MJ0AS0	072MJ0AS
Maintenance kit (For 35ppm, 100,000page)	MK-1140/MAINTENANCE KIT (OPTION) DK-150 DV-132(U)	1702ML0NL0	072ML0NL
	MK-1142/MAINTENANCE KIT (OPTION) DK-150 DV-130(E)	1702ML0KL0	072ML0KL
	MK-1144/MAINTENANCE KIT (OPTION) DK-150 DV-134(AO)	1702ML0AS0	072ML0AS

(4) Firmware Environment Commands

The printer maintains a number of printing parameters in its memory. These parameters may be changed permanently with the FRPO (Firmware RePrOgram) commands.

This section provides information on how to use the FRPO command and its parameters using examples.

Using FRPO Commands for Reprogramming Firmware

The current settings of the FRPO parameters are listed as optional values on the service status page.

Note: Before changing any FRPO parameter, print out a service status page, so you will know the parameter values before the changes are made. To return FRPO parameters to their factory default values, send the FRPO INIT (FRPO-INITialize) command.(!R! FRPO INIT; EXIT;)

The FRPO command is sent to the printer in the following sequence:

!R! FRPO parameter, value; EXIT;

Example: Changing emulation mode to PC-PR201/65A

!R! FRPO P1, 11; EXIT;

FRPO Parameters

Environment	Parameter	Values	Factory setting
Top margin	A1	Integer value in inches	0
	A2	Fraction value in 1/100 inches	0
Left margin	A3	Integer value in inches	0
	A4	Fraction value in 1/100 inches	0
Page length	A5	Integer value in inches	13
	A6	Fraction value in 1/100 inches	61
Page width	A7	Integer value in inches	13
	A8	Fraction value in 1/100 inches	61
Default pattern resolution	B8	0: 300 dpi 1: 600 dpi	0
Copy count	C0	Number of copies to print:1-999	1
Page orientation	C1	0: Portrait 1: Landscape	0
Default font No. *	C2	Middle two digits of power-up font	0
	C3	Last two digits of power-up font	0
	C5	First two digits of power-up font	0
PCL font switch	C8	0:HP compatibility mode (Characters higher than 127 are not printed.) 32:Conventional mode (Characters higher than 127 are printed. Supported symbol sets: ISO-60 Norway [00D], ISO-15 Italian [00I], ISO-11 Sweden [00S], ISO-6 ASCII [00U], ISO-4 U.K. [01E], ISO-69 France [01F], ISO-21 Germany [01G], ISO-17 Spain [02S], Symbol [19M] ^a)	0
Total host buffer size	H8	0 to 99 in units of the size defined by FRPO S5	5
Form feed time-out value	H9	Value in units of 5 seconds (0 to 99).	6
KIR mode	N0	0: Off 2: On	2

Environment	Parameter	Values	Factory setting
Duplex binding	N4	0: Off 1: Long edge 2: Short edge	0
Sleep timer time-out time	N5	1 to 240 minutes [0: Off]	15
Ecoprint level	N6	0:Off 2:On	0
Printing resolution	N8	0: 300dpi 1: 600dpi 3: 1200dpi	1
Default emulation mode	P1	0: Line Printer 1: IBM Proprinter X24E 2: Diablo 630 5: Epson LQ-850 6: PCL 6 9: KPDL	9 (U.S.A) or 6 (Euro and other)
Carriage-return action *	P2	0: Ignores 0x0d 1: Carriage-return 2: Carriage-return+linefeed	1
Linefeed action *	P3	0: Ignores 0x0d 1: Linefeed 2: Linefeed+carriage-return	1
Automatic emulation sensing (For KPDL3)	P4	0:AES disabled 1:AES enabled	1 (U.S.A) or 0 (Euro and other)
Alternative emulation (For KPDL3)	P5	Same as the P1 values except that 9 is ignored.	6
Automatic emulation switching trigger (For KPDL3)	P7	0: Page eject commands 1: None 2: Page eject and Prescribe EXIT 3: Prescribe EXIT 4: Formfeed (^L) 6: Page eject, Prescribe EXIT and formfeed 10: Page eject commands; if AES fails, resolves to KPDL	11 (U.S.A) or 10 (Euro and other)
Command recognition character	P9	ASCII code of 33 to 126	82 (R)

Default operation for PDF direct printing	Y5	0: Enlarges or reduces the image to fit in the current paper size. Loads paper from the current paper cassette. 1: Through the image. Loads paper which is the same size as the image. 2: Enlarges or reduces the image to fit in the current paper size. Loads Letter, A4 size paper depending on the image size. 3: Through the image. Loads Letter, A4 size paper depending on the image size. 8: Through the image. Loads paper from the current paper cassette. 9: Through the image. Loads Letter, A4 size paper depending on the image size. 10: Enlarges or reduces the image to fit in the current paper size. Loads Letter, A4 size paper depending on the imagesize.	0

- a. Characters higher than 127 are printed regardless of the C8 value. However, setting C8 to 0 does not print character code 160.

*. Ignored in some emulation modes.

(5) Maintenance Commands

This section provides information on how to use the maintenance command and its parameters using examples.

Adjusting the print start timing (alternative command for the maintenance mode U034)

Description

Adjusts the leading edge registration or left edge.

Purpose

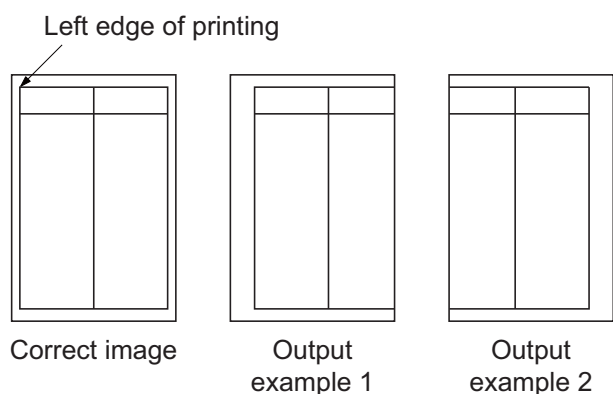

Make the adjustment if there is a regular error between the leading edges of the copy image and original.

Make the adjustment if there is a regular error between the left edges of the copy image and original.

Format	!R! KCFG"PFRC",#1 ,#2 ,#3;	
Parameter	#1	Paper source number 0: MP tray 2-6 : Cassette2-6 100: Duplex (e.g. landscape images short-edge bind) 200: Rotated duplex (e.g. portrait images long-edge bind)
	#2	Edge to adjust 1: Leading edge 2: Left edge
	#3	Adjustable range (-128 to +127) number of dot in 600dpi

Example: Set the leading edge of MP tray to +30 dots

!R! KCFG "PFRC",0,1,30;EXIT;

Adjusting the scanner magnification (alternative command for the maintenance mode U065)**Description**

Adjusts the magnification of the original scanning.

Purpose

Make the adjustment if the magnification in the main scanning direction is incorrect.

Make the adjustment if the magnification in the auxiliary scanning direction is incorrect.

Format	!R! KCFG "SCAN",8, #1,#2;EXIT;	
Parameter	#1	1: Y SCAN ZOOM Scanner magnification in the main scanning direction 2: X SCAN ZOOM Scanner magnification in the auxiliary scanning direction
	#2	#1=1: Adjustable range: -32 to 127 (in 0.1% increment) (0: default) #2=2 : Adjustable range: -25 to 25 (in 0.1% increment) (0: default)

Example: Y SCAN ZOOM set to 55, X SCAN ZOOM set to 10

!R! KCFG "SCAN",8,1,55; KCFG "SCAN",8,2,10;EXIT;

Copy
example 1Copy
example 2

Magnified in the auxiliary
scanning direction

Adjusting the scanner leading edge registration (alternative command for the maintenance U066)

Description

Adjusts the scanner leading edge registration of the original scanning.

Purpose

Make the adjustment if there is a regular error between the leading edges of the copy image and original.

Format	!R! KCFG "SCAN",5,#1,#2;;EXIT;	
Parameter	#1	1: Scanner leading edge registration 2: Scanner leading edge registration of rotated scan
	#2	Adjustable range: -45 to 45 (in 0.086mm increment) (0: default)

Example: Scanner leading edge registration set to 10 to increase 0.86mm

!R! KCFG "SCAN",5,1,"10";EXIT;

Adjusting the scanner center line (alternative command for the maintenance mode U067)

Description

Adjusts the scanner center line of the original scanning.

Purpose

Make the adjustment if there is a regular error between the center lines of the copy image and original.

Format	!R! KCFG "SCAN",6, #1;#2;EXIT;	
Parameter	#1	1: Scanner center line 2: Scanner center line of rotated scan
	#2	#1=1: Adjustable range: -70 to 70 (in 0.086mm increment) (0: default) #1=2: Adjustable range: -40 to 40 (in 0.086mm increment) (0: default)

Example: Scanner leading edge registration set to 20 to increase 1.72mm

!R! KCFG "SCAN",6,1,20;EXIT;

Scanner center line (within ± 2.0 mm)

Adjusting the scanning position for originals from the DP (alternative command for the maintenance mode U068)

Description

Adjusts the position for scanning originals from the DP. Performs the test copy at the four scanning positions after adjusting.

Purpose

Used when the image fogging occurs because the scanning position is not proper when the DP is used. Execute KCFG "EESS",4, 107, 1, "#1"; command to adjust the timing of DP leading edge when the scanning position is changed.

Format	!R! KCFG "SCAN",9, #1,#2;EXIT;	
Parameter	#1	1: DP READ Starting position adjustment for scanning originals 2: BLACK LINE Scanning position for the test copy originals
	#2	#1=1: Adjustable range: -33 to 33 (in 0.086mm increment) (0: default) #1=2: Adjustable range: 0 to 3 (in 0.22mm increment) (0: default)

Example: DP READ set to 15, BLACK LINE set to 3

!R! KCFG "SCAN",9,1,15; KCFG "SCAN",9,2,3;EXIT;

Adjusting the DP magnification (alternative command for the maintenance mode U070)**Description**

Adjusts the DP original scanning speed.

Purpose

Make the adjustment if the magnification is incorrect in the auxiliary scanning direction when the DP is used.

Format	!R! KCFG "SCAN",4, #1;#2;EXIT;	
Parameter	#1	2: CONVEYING SPEED Magnification in the auxiliary scanning direction
	#2	Adjustable range: --25 to 25 (in 0.1% increment) (0: default)

Example: DP scanning magnification set to 20 to increase 2%
